Supplementary Information 2. Methodological quality assessment: questions and scoring flowchart.

Questions
1) Randomization: Was the allocation sequence adequately generated and applied (selection bias)?

2) Baseline characteristics: Were the groups similar at baseline (selection bias)?
   - Were all groups implanted in one animal and where there differences in load bearing between implantation sites (2.1), and if not all groups were in one animal, was randomization adequately performed?
   - How were animal characteristics divided over the groups (2.2)?
   - Where there differences between groups at the moment of surgical intervention (2.3)?

3) Implantation concealment: Was the allocation adequately concealed (selection bias)?

4) Random housing: Were the animals randomly housed during the experiment (performance bias)?

5) Blinding: Where the caregivers and/or investigators blinded from knowledge which intervention each animal received during the experiments (performance bias)?

6) Random outcome assessment: Were the animals selected at random for outcome assessment (detection bias)?

7) Analysis blinding: Was the outcome assessor blinded (detection bias)?

8) Incomplete outcome data: Were incomplete outcome data adequately addressed (attrition bias)?
Flowchart

1) Was the allocation sequence adequately generated and applied?
- Allocation sequence specified?
  - Yes
  - No
    - Yes, but not random
      - Details?
        - Yes
          - 1.1
        - No
          - 1.2
    - No
      - 1.3

2) Were the groups similar at baseline or were they adjusted for confounders in the analysis?
- Part 1: # conditions/animal?
  - Are all conditions in one animal?
    - Yes
    - No
    - Not all conditions in one animal?
      - One condition per animal?
        - Yes
        - No
  - Difference in load-bearing between conditions?
    - Yes
    - No
      - Randomization adequately performed?
        - Yes
        - No
- Part 2: Dividing of characteristics over groups (sex, age, weight)?
  - Are all conditions in one animal?
    - Yes
    - No
    - Not all conditions in one animal?
      - One condition per animal?
        - Yes
        - No
  - Extensive information
    - Yes
    - No
      - 2.1

3) Was the allocation adequately concealed?
- Is there more than 1 scaffold condition and an empty defect?
  - Yes
    - 1.2
  - No
    - 1.3

4) Were the animals randomly housed during the experiment?

5) Were the caregivers and/or investigators blinded from knowledge which intervention each animal received during the experiment?

6) Were the animals selected at random for outcome assessment?
   In general, for this type of in vivo studies these domains are not essential to be assessed. Therefore, only specific examples were reported in footnotes.

7) Was the outcome assessor blinded?
- Reviewer(s) blinded?
  - Yes
  - No
  - Not sure
    - 1.1

8) Were incomplete outcome data adequately addressed?
- Dropout mentioned?
  - Yes
  - No
    - Difference between groups? Intervention related?
      - Yes
      - No
        - Missing data?
          - Yes
          - No
            - + 1.4
            - 1.5
