

**Genome-Wide Association Study Identifies Novel Type II Diabetes Risk Loci in Jordan  
Subpopulations**

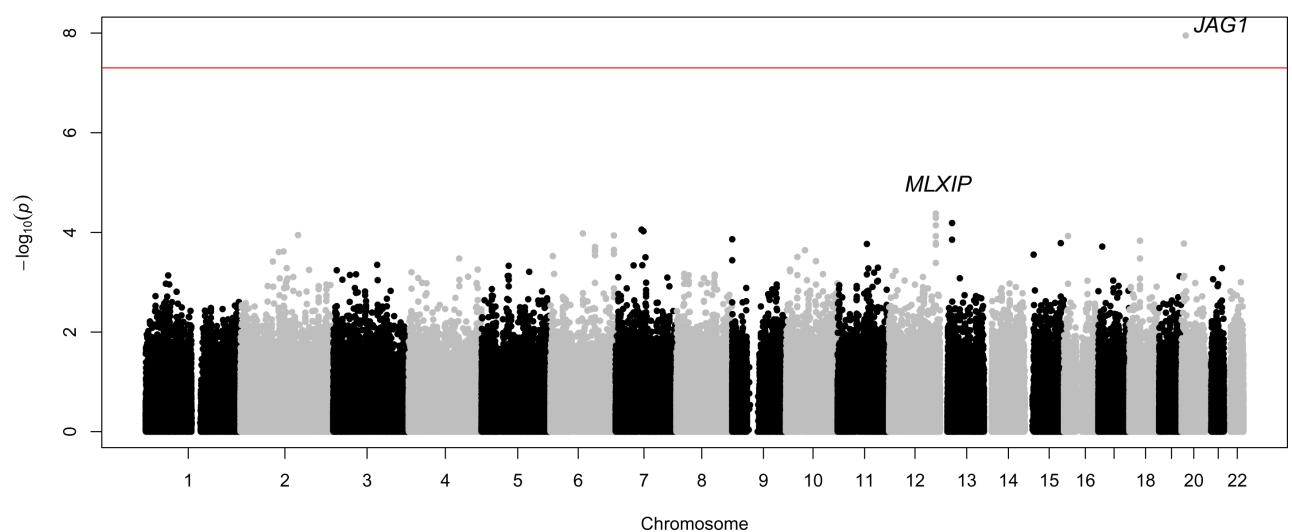

Rana Dajani, Jin Li, Zhi Wei, Michael E. March, Qianghua Xia, Yousef Khader, Nancy Hakooz, Raja Fatahalla, Mohammed El-Khateeb, Ala Arafat, Tareq Saleh, Abdel Rahman Dajani, Zaid Al-Abbad, Mohamed Abdul Qader, Abdel Halim Shiyab, Anwar Bateiha, Kamel Ajlouni, Hakon Hakonarson

**Supplementary Information**

## Supplementary Figures

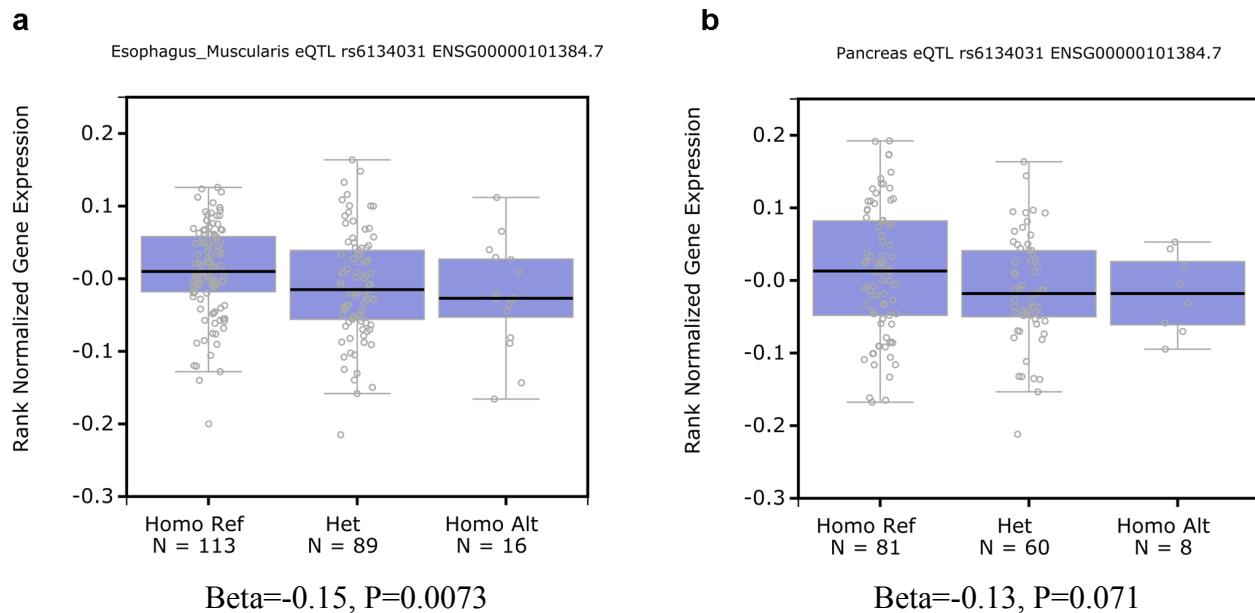

**Supplementary Figure 1. Manhattan plot of the result from the meta-analysis of Chechen and Circassian groups.**

SNPs are sorted by chromosomal location along X axis against their  $-\log_{10}(P\text{-value})$  shown on Y axis. The horizontal line represents the genome-wide significance level  $p=5\times 10^{-8}$ .

**Supplementary Figure 2: The association between SNP rs6134031 genotype and gene *JAG1* expression level in esophagus muscularis and pancreas.**

The relationship between SNP rs6134031 genotype and gene *JAG1* expression level was evaluated in GTEx Portal (GTEx Consortium 2015). Their correlation in **(a)** Esophagus muscularis and **(b)** Pancreas are shown. The different genotype groups of SNP rs6134031 are indicated on the X-axis, with C being the reference allele and T being the alternative allele. The Rank Normalized gene expression level of gene *JAG1* is shown on the Y-axis. The black line in the box plot denotes the median expression level in each genotype group. The bottom and the top border of each box represent the first quartile and the third quartile of the rank normalized gene expression level, respectively. The end of the lower whisker and that of the upper whisker represent the 1.5 interquartile range (IQR). The small grey circles denote *JAG1* expression level of each individual.

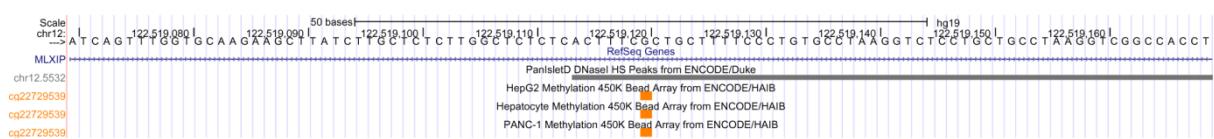

**Supplementary Figure 3.** Epigenetics profiles of the immediate genomic region of

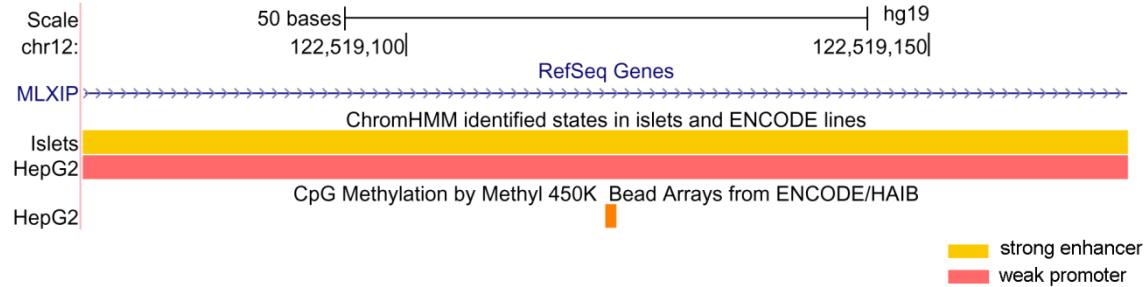

cg22729539.

**(a)** DNase hypersensitivity peaks in pancreatic islets; **(b)** chromatin states in pancreatic islets and human liver carcinoma cells HepG2; **(c)** histone markers in adult liver and pancreatic islets; **(d)** Transcription factor binding sites in pancreatic islets and pancreatic progenitor cells.

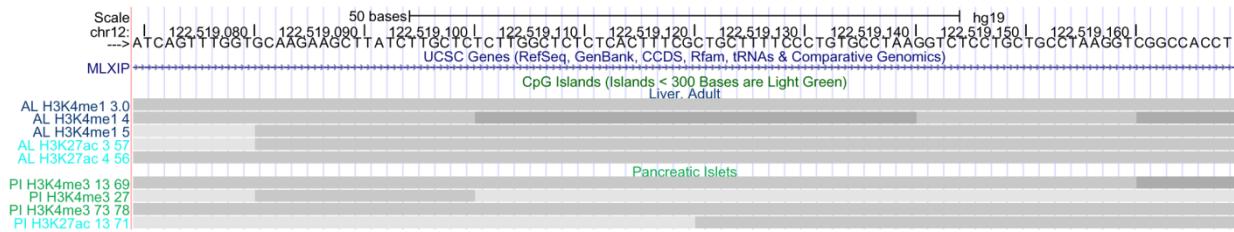

**a**

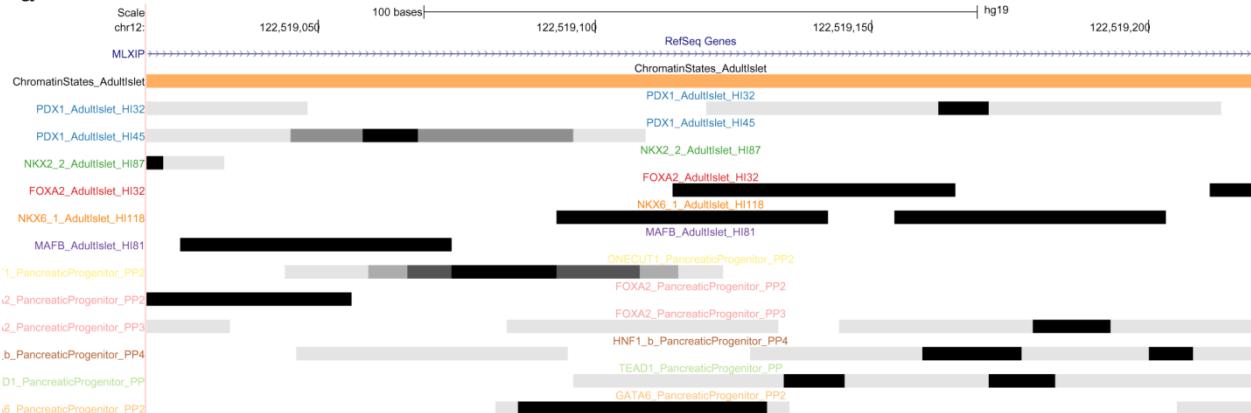

**b**

**c**

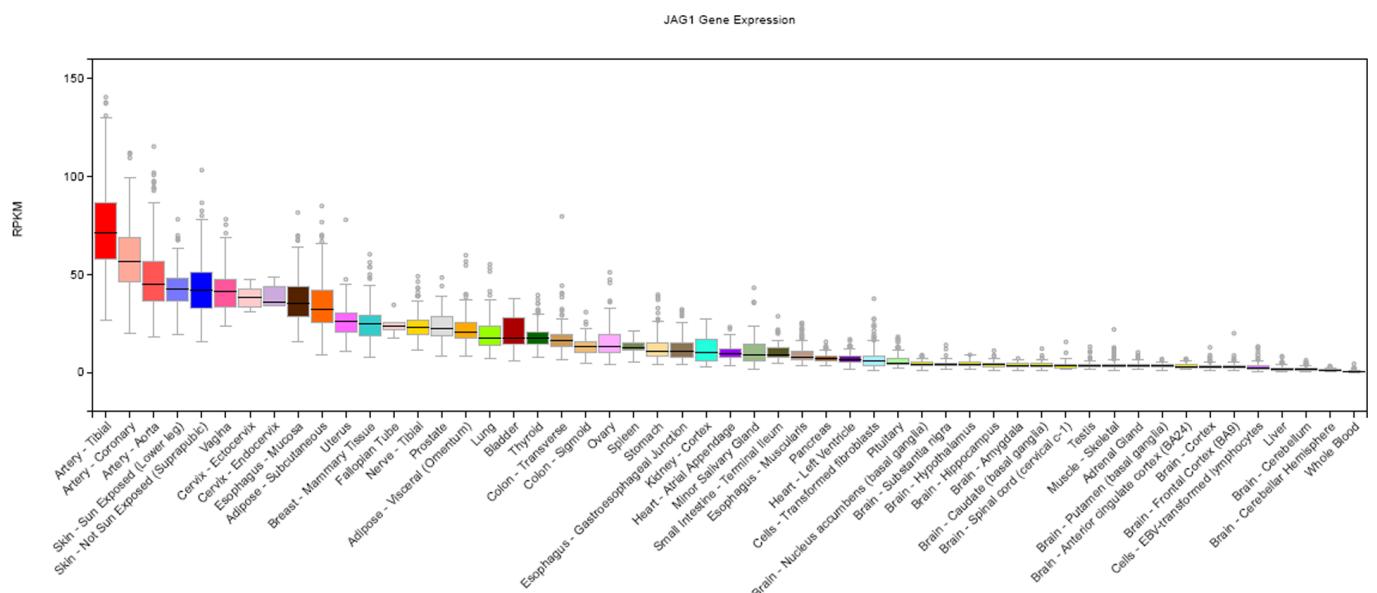

**d**

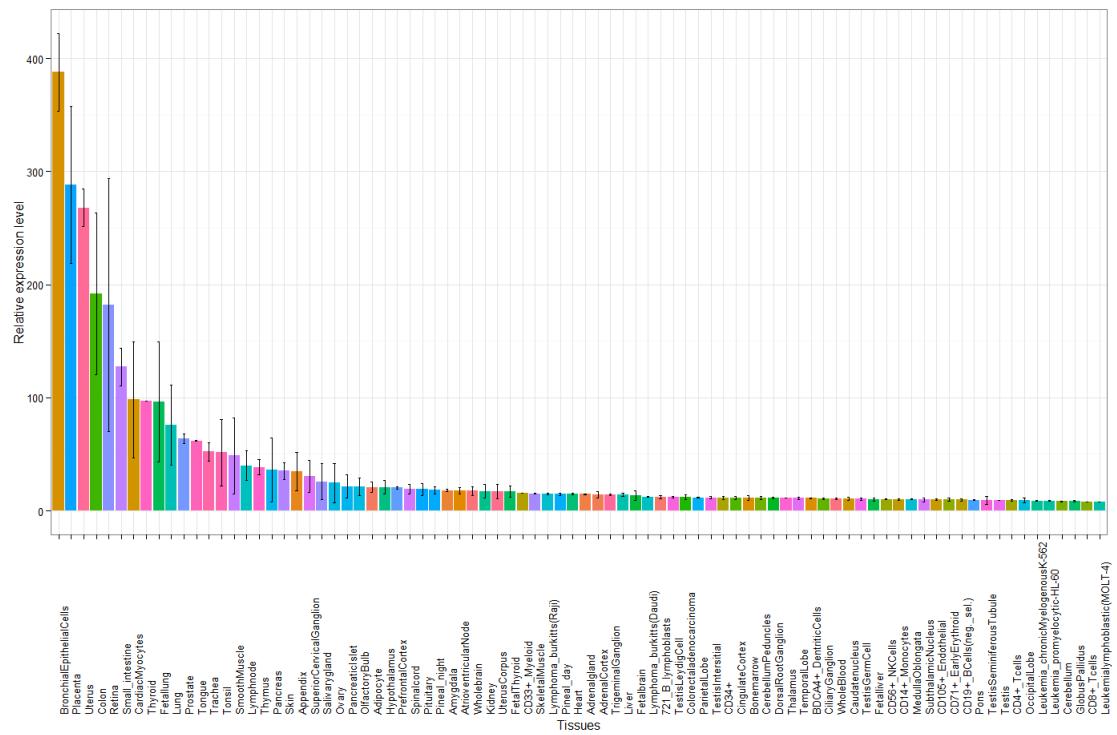

**Supplementary Figure 4: Box plot showing the expression level of *JAG1* gene in different human tissue/cell types, based on GTEx RNA-seq data.**

The plot was generated via GTEx (GTEx Consortium 2015) online portal. Tissue/cell types are indicated on the X-axis, and the normalized gene expression levels are indicated by the RPKM (Reads Per Kilobase of transcript per Million mapped reads) values on the Y-axis. The dark black line in each box shows the median expression level in each cell/tissue type, and the bottom/top border of each box indicates the first/third quartile of the RPKM. The end of the lower whisker and that of the upper whisker represent the lowest and the highest datum within the 1.5 interquartile range (IQR) of the lower quartile and the upper quartile, respectively; and the grey circles represent data points outside of this range.

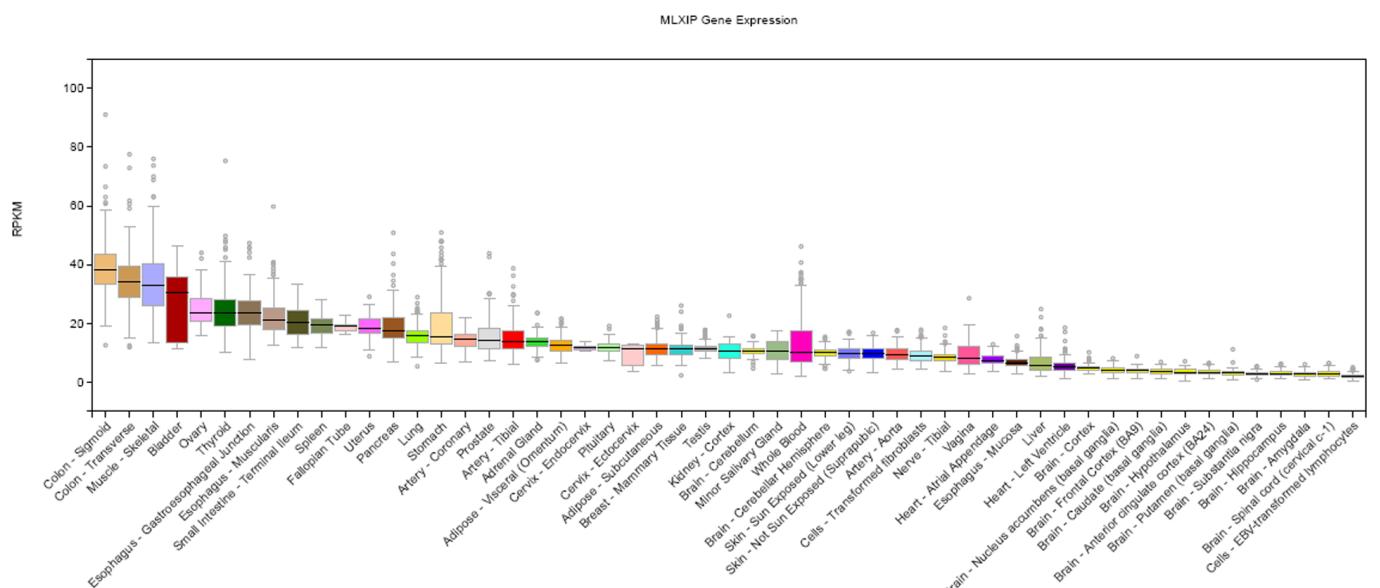

**Supplementary Figure 5: Bar graph showing the expression level of *JAG1* gene in different human tissue/cell types, based on BioGPS microarray data.**

The expression data were downloaded from BioGPS (Wu et al. 2016; Wu et al. 2009) web portal (<http://biogps.org/#goto=welcome>)

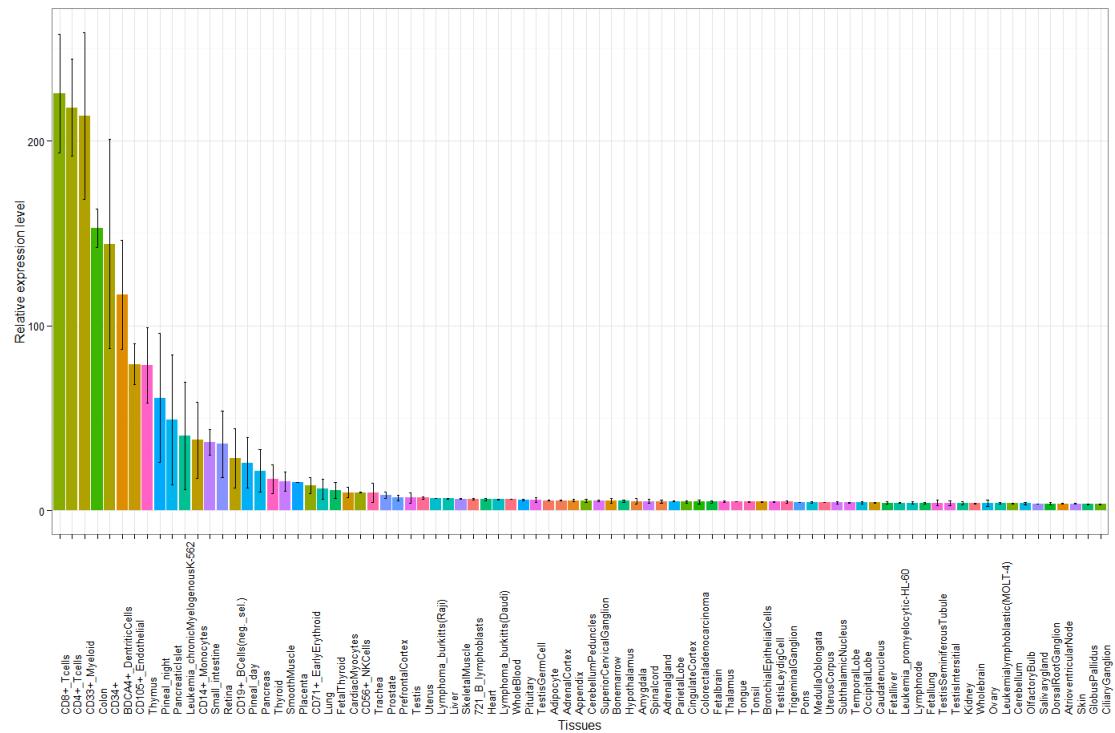

**Supplementary Figure 6: Box plot showing the expression level of *MLXIP* gene in different human tissue/cell types, based on GTEx RNA-seq data.**

The box plot was generated via GTEx (GTEx Consortium 2015) online portal. Tissue/cell types are indicated on the X-axis, and the normalized gene expression levels are indicated by the RPKM (Reads Per Kilobase of transcript per Million mapped reads) values on the Y-axis. The dark black line in each box shows the median expression level in each cell/tissue type, and the bottom/top border of each box indicates the first/third quartile of the RPKM. The end of the lower whisker and that of the upper whisker represent the lowest and the highest datum within the 1.5 interquartile range (IQR) of the lower quartile and the upper quartile, respectively; and the grey circles represent data points outside of this range.

**Supplementary Figure 7: Bar graph showing the expression level of *MLXIP* gene in different human tissue/cell types, based on BioGPS microarray data.**

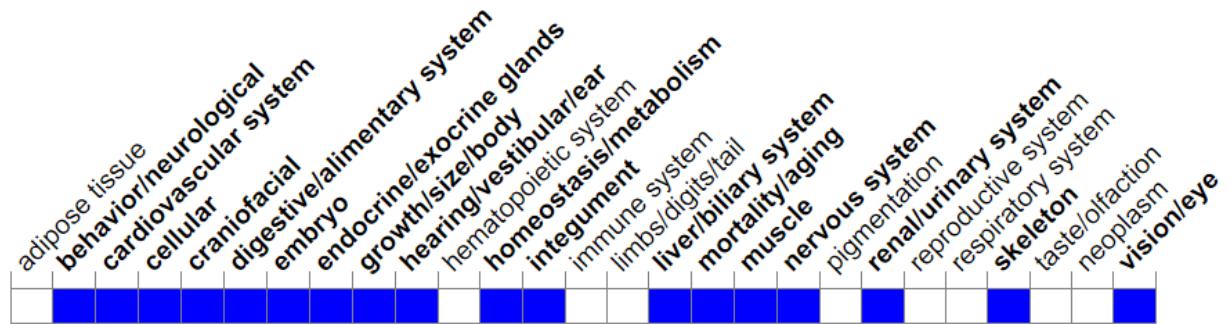

The expression data were downloaded from BioGPS (Wu et al. 2016; Wu et al. 2009) web portal (<http://biogps.org/#goto=welcome>)

### Supplementary Figure 8: Summary of *JAG1* knockout mice phenotype.

The blue boxes indicate the presence of the defects. Information was extracted from

<http://www.informatics.jax.org/marker/MGI:1095416> (Blake et al. 2017; Finger et al. 2017).

## Supplementary Tables
