

Supplementary material

This material is provided for: “A data set with kinematic and ground reaction forces of human balance”.

The marker set model used in this study is based on the work of Leardini and collaborators (2011; 2007). There is a tutorial of the Visual3D software for the IOR Full Body Model (http://c-motion.com/v3dwiki/index.php?title=Tutorial:_IOR_Gait_Full-Body_Model) which is close related to the present model we employed.
