Supplementary figure 2. Maximum likelihood trees of type I and II MADS-box transcription factors in pear. (a) Tree of type II genes: a total of 56 type II MADS-box proteins in pear, 46 in Arabidopsis, and 8 in rice were used to construct the ML tree. The subgroups are indicated by different branch colors. (b) Tree of type I genes: a total of 39 type I MADS-box proteins in pear and 61 in Arabidopsis were used to construct the ML tree. The subgroups are indicated by different branch colors.
