Data set annotation

The data for this study are in `chimpskintemperature.csv`. The data set contains the following columns:

- **Date** The calendar date the image was recorded.
- **fem** Subject ID
- **img** Image ID.
- **temper** Subject skin temperature ($^{\circ}$ Celsius).
- **humid** Humidity (percent).
- **dist** Distance between camera and subject (meters).
- **ambitemp** Ambient temperature ($^{\circ}$ Celsius).
- **bodypart** Bodypart of the subject.
- **preg** Was the female pregnant (1) or cycling (0).
- **swell** The swelling stage of the female (0 through 4).

Read data and raw data figures
