

Supplementary Figure S1

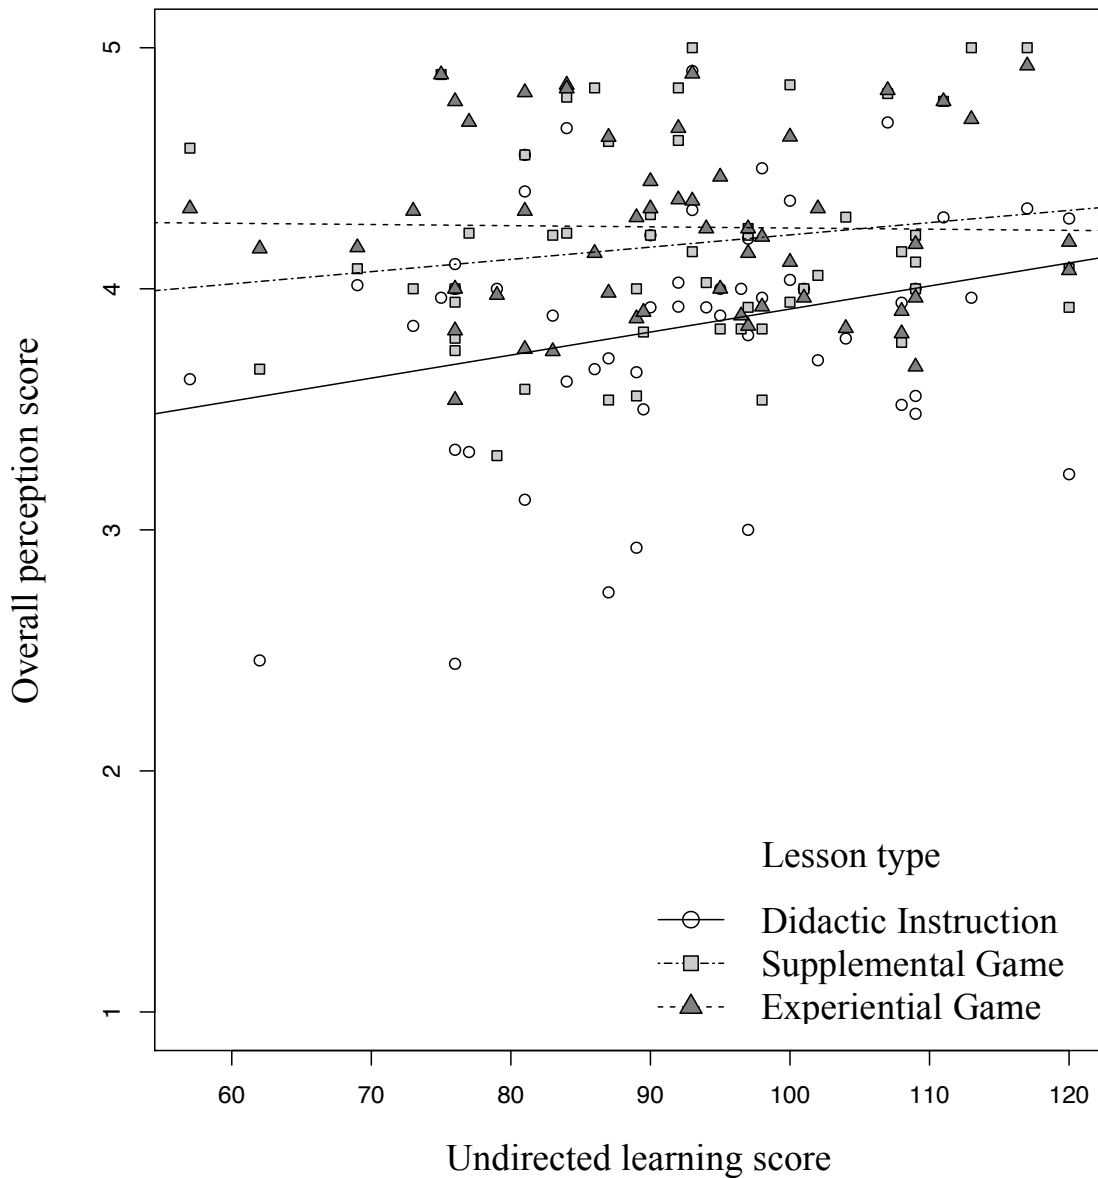

Figure S1. Figure showing relationship between overall perception score and undirected learning score. There was a significant interaction between lesson type and undirected learning score (General Linear Mixed Model models: $\chi^2 = 7.29$, $df = 2$, $p = 0.026$). The correlation coefficient for Didactic Instruction is 0.009, that for Supplemental Game is 0.005 and that for Experiential Game is 0.
