1 Supplementary information

2 Methods

3	Instructions presented via the projector to subjects immediately prior to the start of the
4	working-memory task variant:

- In this task you will see and hear patterns on the screen, and tones in the
 headphones. Please keep your eyes on the red fixation point.
- 7 When the blue button appears, please press the button as fast as possible.
- 8 When you see the letters, press the button if the final letter was also present in the
- 9 *first group of letters. If the final letter was NOT in the first group, don't push the*
- 10 *button*.
- 11 Instructions presented via the projector to subjects immediately prior to the start of the
- 12 eye-movement task variant:
- In this task you will see and hear patterns on the screen, and tones in the
 headphones. Please keep your eyes on the red fixation point.
- 15 *When the blue button appears, please press the button as fast as possible.*
- 16 *When the red fixation point moves, please follow it with your eyes.*

18 Supplementary figure 1. Schematic of the task paradigm. Both variants contained the

19 three trial types on the top row (visual, auditory, and motor trials). The eye-movement

20 variant also included eye-movement trials (bottom-left) and the working-memory variant

21 also included working-memory trials (bottom-right).

24 Supplementary figure 2. BOLD activation data (Z-scores) and ICC(3,1) reliability values

from the eye-movement task variant. Both thresholded at Z > 3.1, p < 0.05, cluster-

corrected, and represented on the same anatomical image in order to visualize the spatial

27 relationship between the two sets of data. a) Auditory trials. b) Motor trials. c) Visual

trials. d) Eye movement trials.

30 Supplementary figure 3. BOLD activation data (Z-scores) and ICC(3,1) reliability values

from the working-memory task variant. Both thresholded at Z > 3.1, p < 0.05, cluster-

32 corrected, and represented on the same anatomical image in order to visualize the spatial

relationship between the two sets of data. a) Auditory trials. b) Motor trials. c) Visual

34 trials. d) Working-memory trials.

Supplementary figure 4. Regions used in the ROI analyses. Visualized on the cortical
surface (upper panel) and on a set of axial slices (lower panel). ROIs were independently
defined as 5mm-radius spheres, using positioning coordinates determined using guidance
from relevant meta-analytic terms on Neurosynth (http://neurosynth.org/).

42 Supplementary figure 5. Activation data from the eye-movement variant progressively 43 thresholded at higher Z values. Z=2.3 (equivalent to p = 0.01) in red. Z = 3.1 (equivalent 44 to p = 0.001) in green. Z = 3.7 (equivalent to p = 0.001) in blue. Z = 4.3 (equivalent to p 45 = 0.00001 in yellow. a) Auditory trials. b) Motor trials. c) Visual trials. d) Eye movement 46 trials.

Supplementary figure 6. Activation data from the working-memory variant progressively thresholded at higher Z values. Z=2.3 (equivalent to p = 0.01) in red. Z = 3.1 (equivalent to p = 0.001) in green. Z = 3.7 (equivalent to p = 0.001) in blue. Z = 4.3 (equivalent to p= 0.00001 in yellow. a) Auditory trials. b) Motor trials. c) Visual trials. d) Workingmemory trials.

Supplementary Figure 7. Median ICC(3,1) values from images masks derived from
progressive thresholding of the activation data at higher *Z* values. Left panel = eyemovement variant. Right panel = working memory variant.

	Region	Extent	Max	COG X	COG Y	COG Z
		(voxels)	(Z score)	(MNI)	(MNI)	(MNI)
Auditory	RH Auditory Cortex	3735	6.72	56	-16	4
