

Suppl.Fig.S4. Growth kinetics and HMBA-mediated differentiation in MEL/Was^{-/-} cells.

A) Growth kinetics of MEL and MEL/Was^{-/-} cells measured every 24 hours over 4 days. B) Percentage of differentiation in MEL cells and MEL/Was^{-/-} transfectants. Differentiated cells (B+) were determined by benzidine assay. Cells were cultured in the presence of 5 mM HMBA for 96 hours. Each bar in A) and B) indicates the standard deviation of three independent experiments.
