

Supplementary information for ‘A prevalence of *Arthropterygius*
(Ichthyosauria: Ophthalmosauridae) in the Late Jurassic –
earliest Cretaceous of the Boreal Realm’
by Nikolay G. Zverkov & Natalya E. Prilepskaya

Supplemental tables

Table S1. Selected measurements for *Arthropterygius chrisorum*

Quadrates	CCMGE 3-16/13328		CCMGE 17-44/13328		PMO 222.669 l/r	
Maximal length of ventral portion (condylar region)	53,7		64		83/81	
Width of the condyle (acond)	23,5		23(compressed)		42.5/44.2	
Height	84		102		124/118	
Length in the region of quadrate foramen	44		49		60/-	
Basisphenoid	CCMGE 3-16/13328		CCMGE 17-44/13328	CNM 40608	PMO 222.669	
Length	57		63	78	73	
Width	34x2=68		74 [est]	98	83	
Height	32,8		42	~50	?	
Scapula	CCMGE 3-16/13328		PMO 222.655	SGM 1573	PMO 222.669	
Length	135,7		123	-	205/190	
Width of proximal end	85,7		67	-	141/125	
Width/thickness of the shaft	35,5/15,4		36/-	87/40	58/55	
Interclavicle SGM 1573						
width	250					
length	150					
Coracoid (left/right)	CCMGE 3-16/13328				PMO 222.669	
Anteroposterior length	141/145				260/265	
Mediolateral width	130/130				210/215	
Length of medial symphysis	95/94				170	
Thickness of the medial facet	34/34				80	
Length of glenoid contribution	64/58				77inc/96	
Length of scapular facet	27/20				72/66	
Humerus	CCMGE 3-16/13328	CCMGE 17-44/13328	SGM 1573	PMO 222.669 (L/R)	PMO 222.655	CNM 40608
Proximodistal length	99	151	220	160/163	86	220
Width of proximal end	73	121	185	124/113.5	49[incompl.]	172
Height (thickness) of proximal end	27	60	95	62/63		97
Width of distal end (fU/fR/faae)	77.3(37/36/25)	122(50/45/39)	?(-/68/58)	121(52/49/40)/120(52/51/37)	60(34/30/25)	195(?)
Thickness of distal end (fU/fR/faae)	30(22/30/24)	47(38/45/38)	76(-/76/60)	54(41/54/45)//50(39.3/48.7/37)	30(20/30/25)	(?)
Width of the shaft	60	84	125	77/78	44	130
Femur	CCMGE 17-44/13328				CNM 40608	
Proximodistal length	112				148	
Width of proximal end	51				75	
Width of distal end	55				86

*measurements from the photographs are in regular font, direct measurements are in bold font.

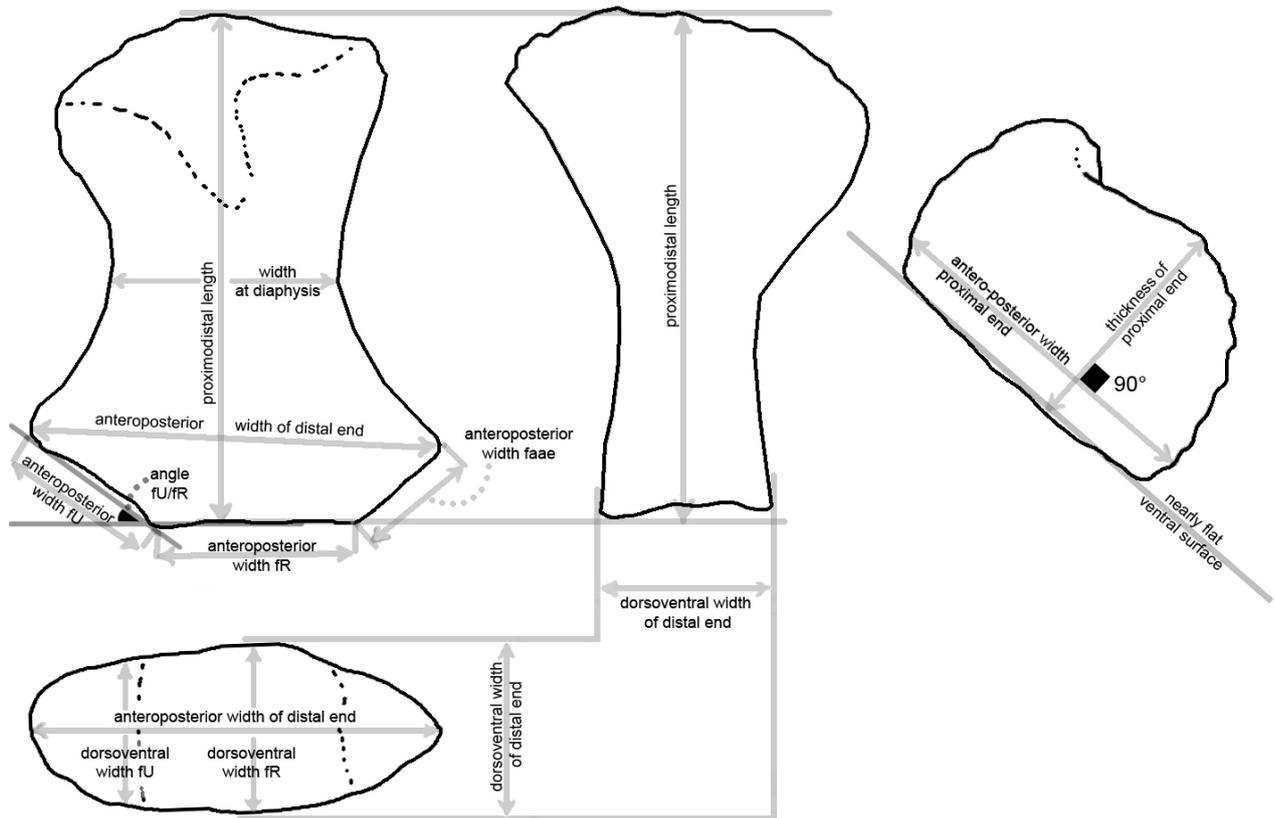

Figure S1. Scheme of measurements of the humerus applied herein. More common is metric “dorsoventral width” of proximal end of the humerus, however, considering an existing torsion between the proximal and distal ends of the humerus, precise identification of what is “dorsoventral width” became problematic especially in humeri with markedly anteroposteriorly elongated proximal ends and low angles of humeral torsion. By this reason, here we use another similar metric “thickness of proximal end” which could be defined as maximal height of the humeral proximal end measured perpendicular to the flat ventral surface of the humerus.

Table S6. Measurements of ophthalmosaurid humeri (mm). In grey cells are specimens for which measurement are taken from the literature.

Taxon (specimen)	L / R	Proximo-distal length	Antero-posterior width proximal end	Thick-ness of proximal end	Antero-posterior width of distal end	Dorso-ventral width of distal end	Width at diaphysis	Anteroposterior width			Dorso-ventral width		Angle between fR and fU in dorsal view (°)

List of ratios in Table S7.

- (1) Humeral proximal expansion: anteroposterior width of humeral proximal end divided by the humeral proximodistal length.
- (2) Humeral distal expansion: anteroposterior width of humeral distal end divided by the humeral proximodistal length.
- (3) Humeral stoutness: humeral minimal anteroposterior width at diaphysis divided by the humeral proximodistal length.
- (4) Humeral proximodistal proportionality: anteroposterior width of humeral proximal end divided by the same measurement of its distal end.
- (5) Isometry of humeral proximal end (or ‘anteroposterior elongation’ of humeral proximal end): anteroposterior width of humeral proximal end divided by the thickness of humeral proximal end (see Fig. S1).
- (6) Humeral distal compression: anteroposterior width of humeral distal end relative to the maximal dorsoventral width of humeral distal end.
- (7) Relative anteroposterior width of facet for preaxial accessory epipodial element and radial facet.
- (8) Relative anteroposterior width of ulnar and radial facets.
- (9) Relative dorsoventral width of ulnar and radial facets.
- (10) Angle between the ulnar and radial facets (rad).

Supplemental figures

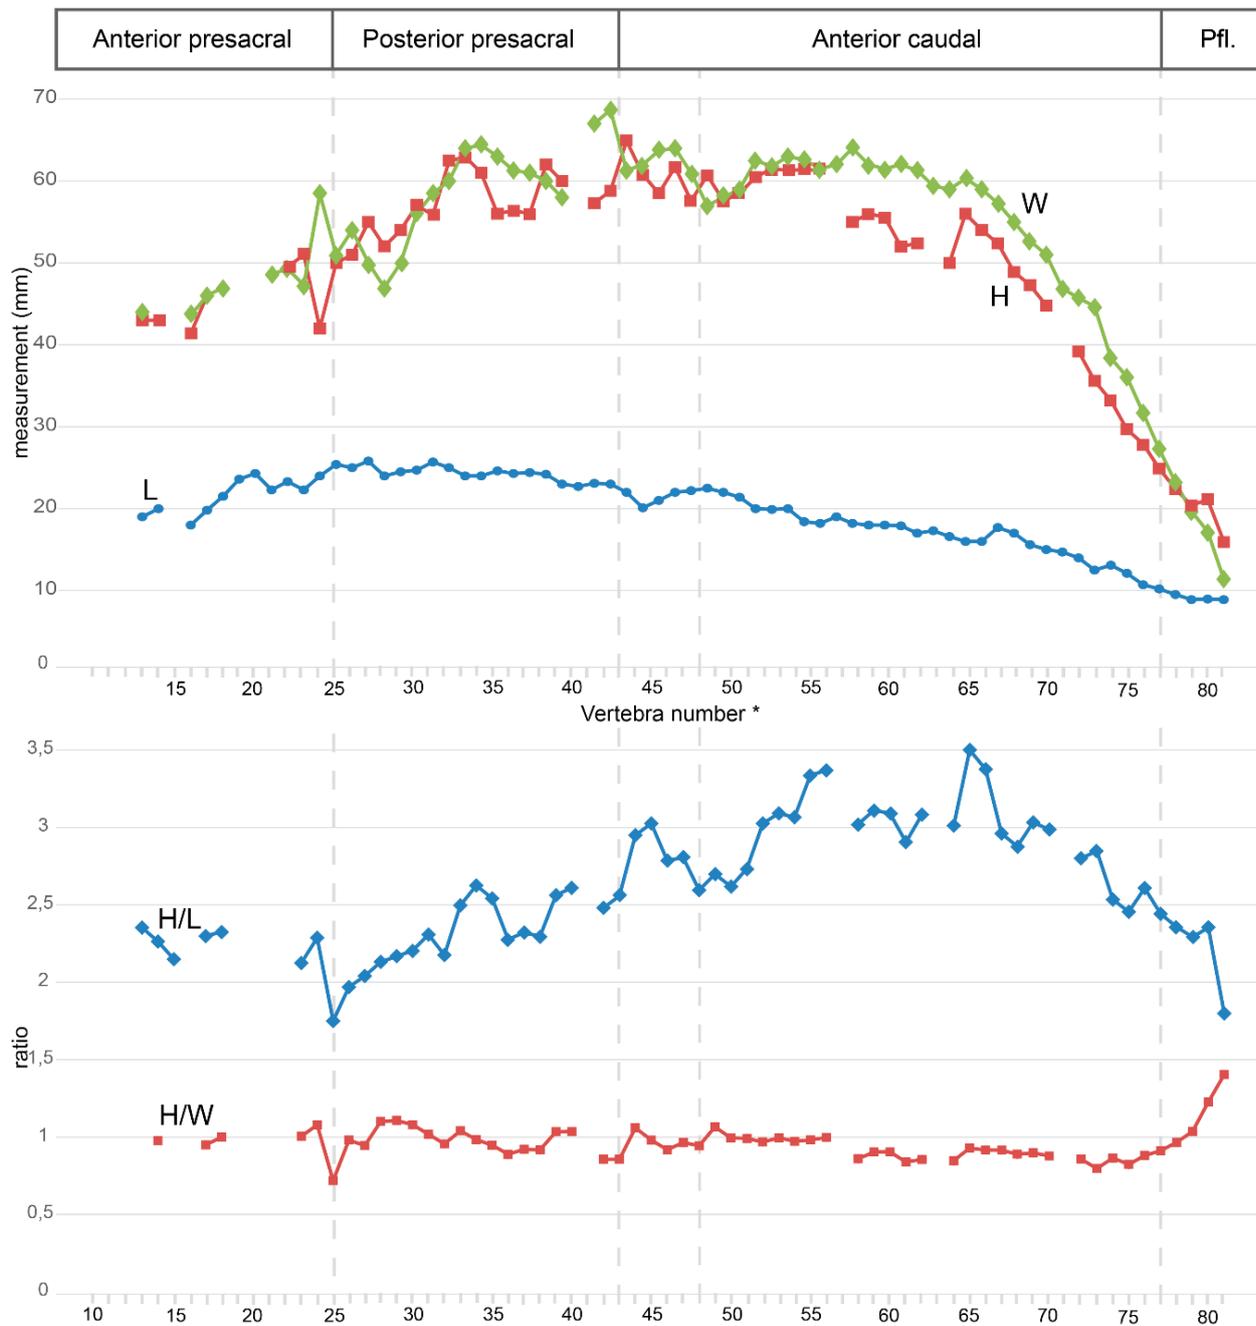

Figure S2. Vertebral dimensions of *Arthropterygius chrisorum* (CCMGE 3-16/13328). *The x-axis refers to a hypothesized position of centrum within the vertebral column: the first centrum in which diaporphysis is not fused to the neural arch was counted as 25th (as in *O. icenicus* see Moon & Kirton 2016) and the rest centra were numbered respectively).

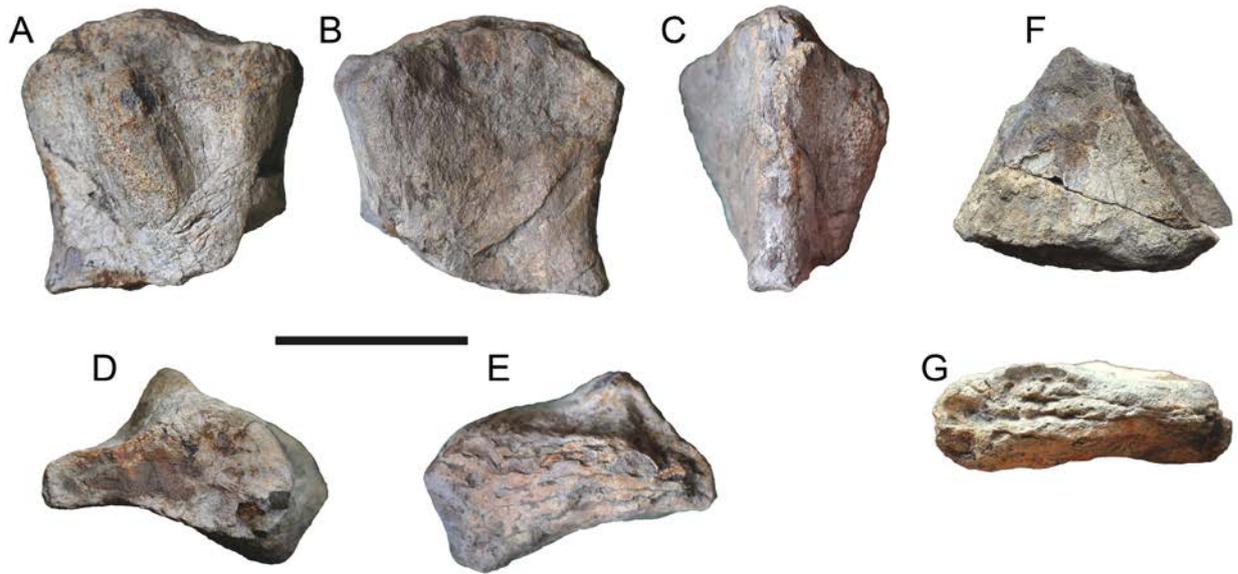

Figure S3. Proximal part of the right humerus (A–E) and glenoid portion of the ?left scapula (F–G) of Ophthalmosauridae indet. cf. *Arthropterygius* sp. CCMGE 1-2/13328. Wilczek Land. Kimmeridgian to Volgian part of the Hofer Formation. found *ex situ*. CCMGE 1-2/13328 referred to *Arthropterygius* based on strongly compressed shaft of the humerus despite over all big size and apparent maturity. A, dorsal view; B, ventral view; C, posterior view; D, cross-section of the shaft; E, proximal end of the humerus; F, dorsal view of scapular fragment; G, proximal view of scapular fragment. Scale bar represents 10 cm.

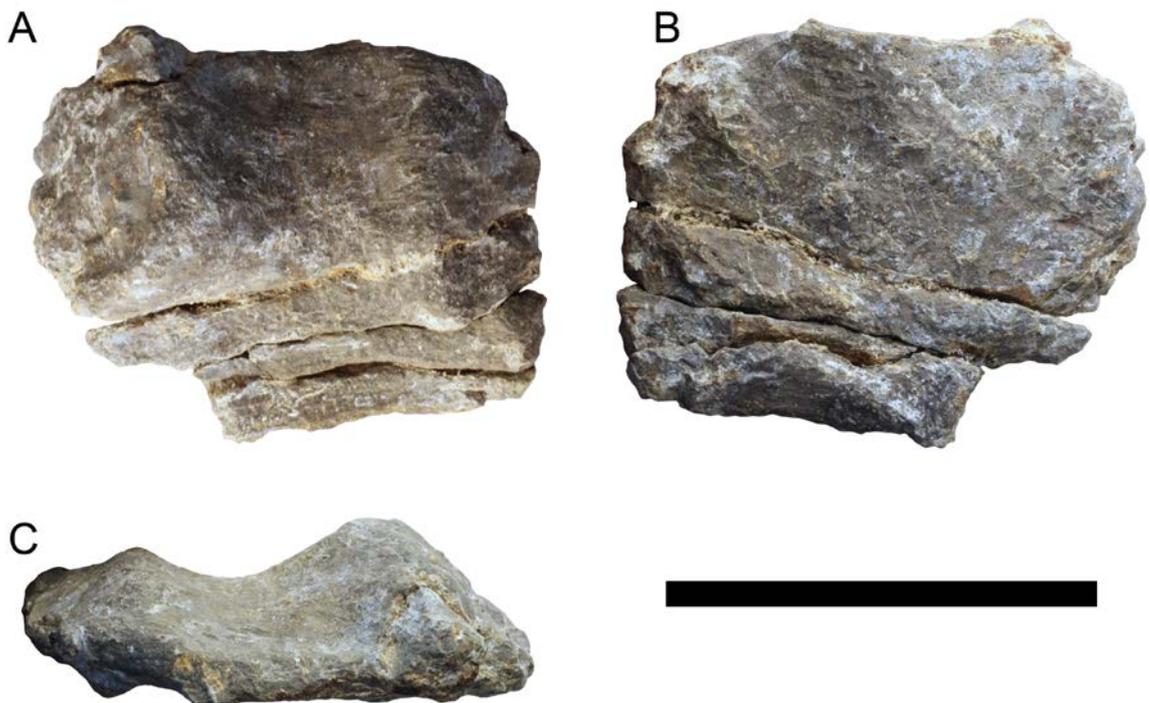

Figure S4. Left articular of *Arthropterygius hoybergeri* SVB 1451 in medial (A), lateral (B) and dorsal (C) views. Scale bar represents 5 cm.

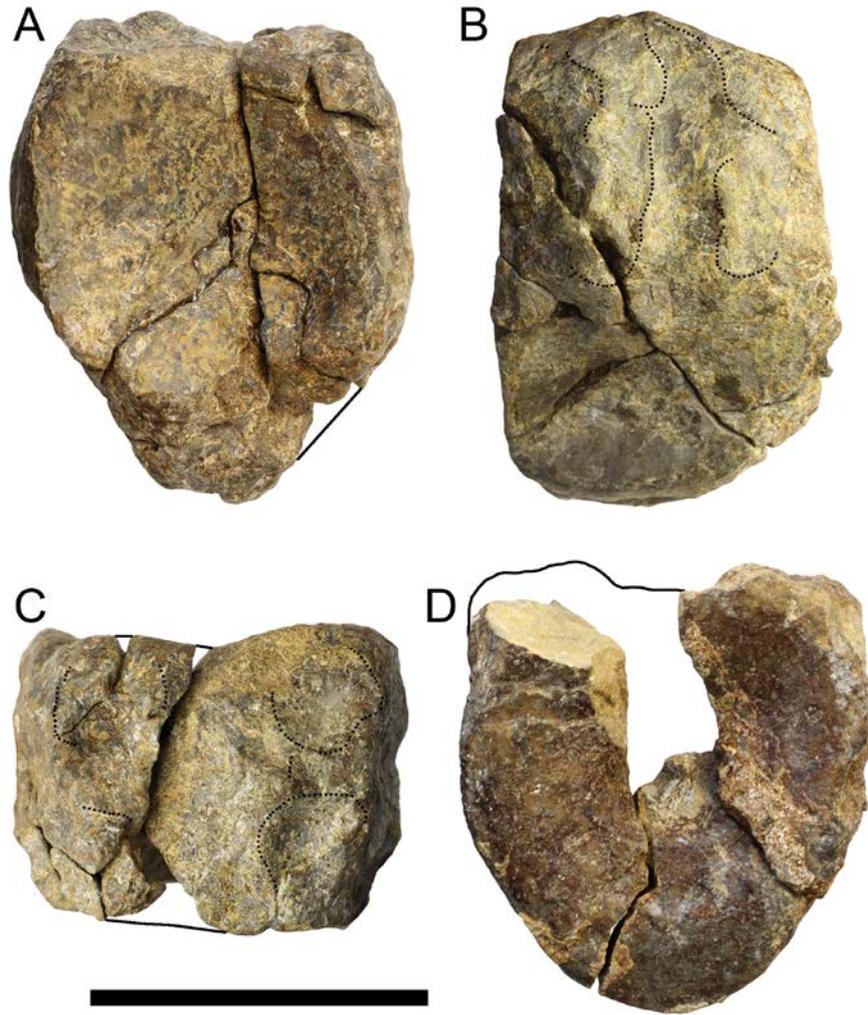

Figure S5. Atlas-axis complex and anterior presacral vertebral centrum of *Arthropterygius hoybergeti* SVB 1451. **A–C**, Atlas-axis in anterior (A), right lateral (B) and dorsal (C) views; **D**, articular view of presacral vertebral centrum. Scale bar represents 5 cm.

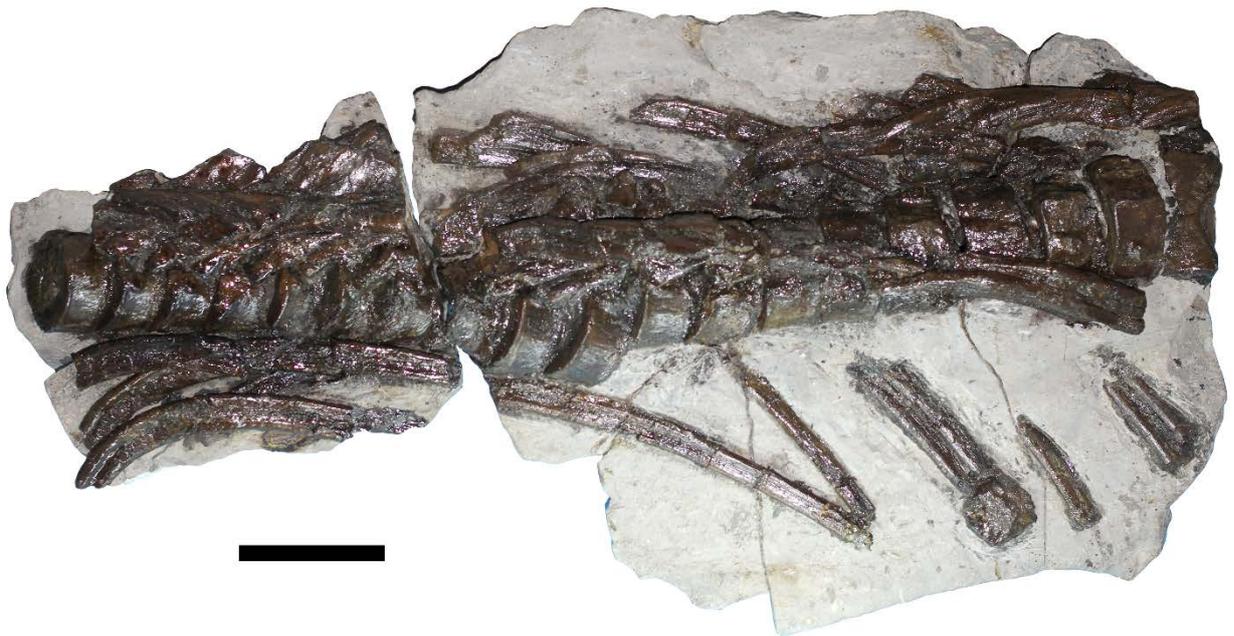

Figure S6. *Arthropterygius hoybergeti* YKM 63548. a series of presacral vertebra with articulated neural arches and ribs. Scale bar represents 10 cm.

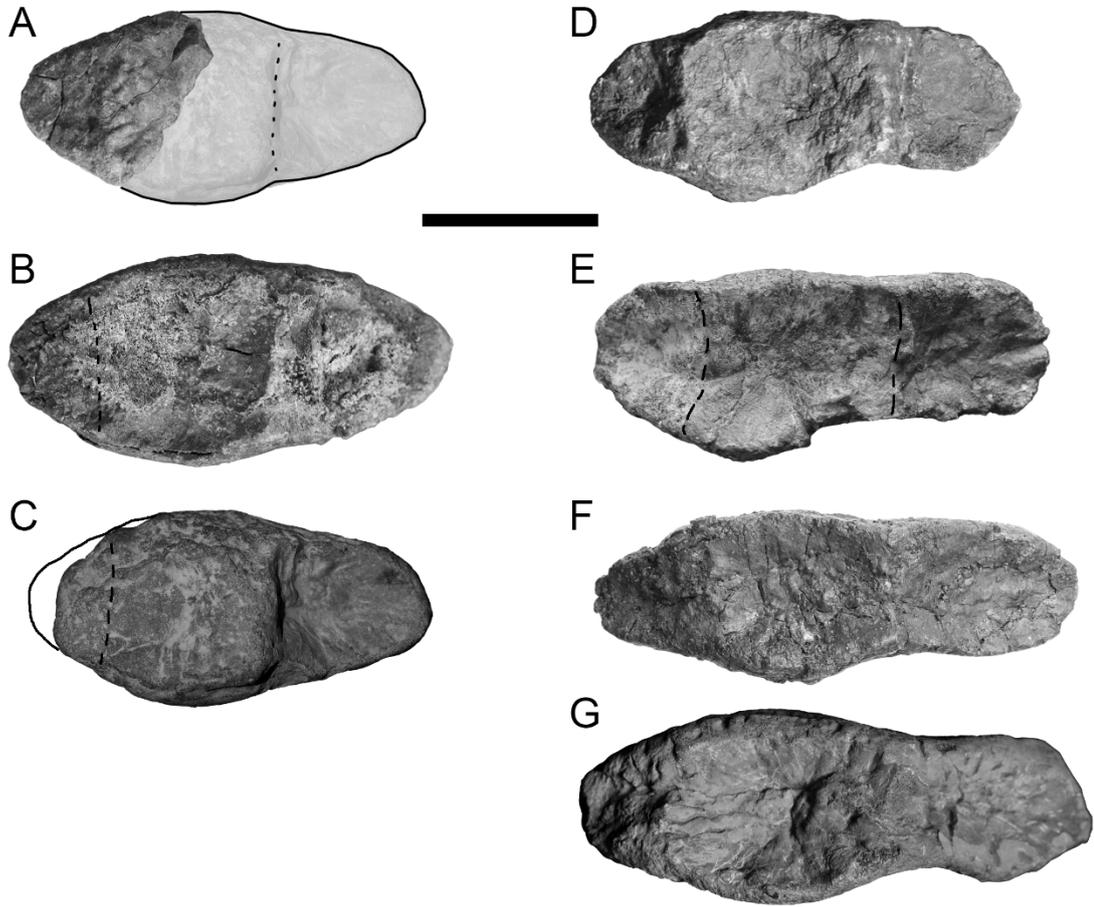

Figure S7. *Arthropterygius* distal humeral ends. A-C, *Arthropterygius lundi* SVB 1451 (A), YKM 63548 (B) and UPM 2442 (C); *A. chrisorum* PMO 222.669 (D) and CCMGE 17-44/13328 (E), *A. lundi* PMO 222.654 (F), SGM 1502 (G). Scale bar represents 5 cm.

Figure S8. *Arthropterygius lundi* SGM 1731-01–15. anterior presacral vertebra with articulated neural arches. Scale bar represents 10 cm.

Modifications of character-taxon matrix

Table S10. Illustrated list of new characters		
*107	Supratemporal anteromedial tongue covering postfrontal dorsally: absent (0); present (1).	
*108	Parietal medial symphysis anteroposteriorly long (0); short (1).	
*109	Quadrate angular process present (0); extremely reduced (1)	
110	Quadrate condyle massive. strongly expanded (0); weak. mediolaterally compressed (1). *not exceeding 230 percent of quadrate mediolateral thickness in its midheight.	
*111	Angle between the articulated coracoids: 180-160° (0). 150-130° (1). <130° (2).	

*112	Size of anterior accessory epipodial facet of the humerus: very small or even absent (0); well pronounced but not as large as radial facet (1); as large as radial facet or even larger (2).	
------	--	--

Character coding revision

The following character coding revisions were applied to the matrix of Zverkov & Efimov (2018)

Arthropterygius chrisorum: 13.?→13.0; 14.?→14.1; 16.?→16.0; 22.?→22.1; 23.?→23.0; 29.?→29.0; 31.?→31.0; 37.?→37.0; 57.?→57.0; 61.?→61.1; 65.?→65.0/1; 73.?→73.0; 76.?→76.0; 77.?→77.0; 78.?→78.1; 87.?→87.0/1; 91.?→91.1; 98.?→98.2; 99.?→99.0;

'Janusaurus' lundii: 3.?→3.0; 5.?→5.1; 21.?→21.1; 26.?→26.0; 28.1→28.0; 31.?→31.0; 32.?→32.0; 38.?→38.0; 39.?→39.0; 40.?→40.2; 58.?→58.0; 73.?→73.0; 97.0→97.?

'Palvennia' hoybergeti: 9.?→9.1; 10.0→10.1; 21.1→21.?.; 28.1→28.0; 59.1→59.0; 79.?→79.1; 81.?→81.1; 83.?→83.1; 84.?→84.1; 87.?→87.0/1; 88.?→88.0; 89.?→89.1

(all based on new observations and conceding taxonomic revisions)

Undorosaurus gorodischensis: 28.?→28.1 (omission of Zverkov & Efimov 2018)

Paraophthalmosaurus saveljeviensis: 12.0→12.1 (new observations); 28.1→28.0 (omission of Zverkov & Efimov 2018); 41.0→41.1 (omission of Zverkov & Efimov 2018)

Sveltonectes insolitus: 49.1→49.? (new observations of NGZ - 'prootic' is in fact misidentified portion of the supraoccipital)
