The bar chart displays the frequency of ARID1A protein expression levels under different conditions:

- **Loss**
- **Low**
- **High**

The chart compares the expression levels across different types:

- **Wildtype**
- **Missense**
- **Truncation**

- **Loss** shows a high frequency for Wildtype and Truncation, with Missense being lower.
- **Low** shows a higher frequency for Missense compared to Wildtype and Truncation.
- **High** shows a high frequency for Wildtype, with Missense and Truncation being lower.

The y-axis represents the frequency, ranging from 0 to 100.
