

## Supplemental Figure S1. The results of electrophoresis of amplicons.

Amplicons using PCR primers designed in this study (Table S1) were confirmed to be single bands by electrophoresis. **A**, The photographs of Psa6 amplicons. **B**, The photograph of Psa1 amplicons. **C**, The photograph of Psa3 amplicons. **D**, The photograph of Psg amplicons.

Lane

M: 100bp ladder marker

1: 50S ribosomal protein L13

2: bifunctional glutamine synthetase

adenyltransferase/deadenyltransferase

3: transcriptional regulator *fraA*

4: microcin ABC transporter

ATP-binding protein

5: tRNA dihydrouridine(20/20a) synthase

*dusA*

6: *cfl*
