

Software: Primer 6.0

Type of analysis: Hierarchical cluster analysis

Reply figure 1. Diagram of cluster analysis procedures.

Software: Canoco 4.5

Type of analysis: DCA

Square root-transformation of species data.

[Wed Jul 08 13:46:58 2020] CON file [D:\Canoco\spe.con] saved
Program CANOCO Version 4.5 February 2002 - written by Cajo J.F. Ter Braak
(C) 1988-2002 Biometris - quantitative methods in the life and earth sciences
Plant Research International, Wageningen University and Research Centre
Box 100, 6700 AC Wageningen, the Netherlands
CANOCO performs (partial) (detrended) (canonical) correspondence analysis,
principal components analysis and redundancy analysis.
CANOCO is an extension of Cornell Ecology program DECORANA (Hill,1979)

Species data : D:\Canoco\spe.dta

Covariable data :

Environmental data :

Initialization file:

Number of segments = 26

Nonlinear recaling of axes

Rescaling threshold = 0.00

Number of axes in biplot = 2

Diagnostics = 2

File : D:\Canoco\spe.dta
 Title : WCanoImp produced data file
 Format : (I5,1X,5F14.9,27(/6X,(5F14.9)))
 No. of couplets of species number and abundance per line : 0

No samples omitted
 Number of samples 23
 Number of species 137
 Number of occurrences 797

Square root-transformation of species data
 No species-weights specified
 No sample-weights specified
 No downweighting of rare species

No. of active samples: 23
 No. of passive samples: 0
 No. of active species: 137

Total inertia in species data=
 Sum of all eigenvalues of CA = 1.60531

**** Summary ****

Axes	1	2	3	4
Total inertia				
Eigenvalues	: 0.229	0.129	0.070	0.041
1.605				
Lengths of gradient	: 1.773	1.421	1.164	1.052
Cumulative percentage variance				
of species data	: 14.2	22.3	26.7	29.2
Sum of all eigenvalues				
1.605				

Note: The gradient length of the first DCA axis was 1.773.

Type of analysis: RDA.

- The relative abundance data was square root transformed to reduce the effect of extremely high values.
- Thirteen environmental variables, i.e. depth, SST, SSS, oxygen, phosphate, nitrate, silicate, chlorophyll-a, particulate organic carbon, clay percentage, silt percentage, sand percentage, and mean grain size.
- Automatic forward selection with Monte Carlo tests (999 permutations)
- “5” was set as the maximum acceptable level of VIF.

Program CANOCO Version 4.5 February 2002 - written by Cajo J.F. Ter Braak

(C) 1988-2002 Biometris - quantitative methods in the life and earth sciences

Plant Research International, Wageningen University and Research Centre

Box 100, 6700 AC Wageningen, the Netherlands

CANOCO performs (partial) (detrended) (canonical) correspondence analysis,
principal components analysis and redundancy analysis.

CANOCO is an extension of Cornell Ecology program DECORANA (Hill,1979)

For explanation of the input/output see the manual or

Program CANOCO Version 4.5 February 2002 - written by Cajo J.F. Ter Braak

(C) 1988-2002 Biometris - quantitative methods in the life and earth sciences

Plant Research International, Wageningen University and Research Centre

Box 100, 6700 AC Wageningen, the Netherlands

CANOCO performs (partial) (detrended) (canonical) correspondence analysis,
principal components analysis and redundancy analysis.

CANOCO is an extension of Cornell Ecology program DECORANA (Hill, 1979)

For explanation of the input/output see the manual or
