

Figure S1. Enzyme activities (CAT, SOD, POD, PPO, PAL) and total phenols given by the difference between inoculated and control plants. Rio Grande” grafted on “Cherry” (RGCh) and “Rio Grande” grafted on eggplant (RGBer)

Positive values mean inoculated plants had higher activity (or total phenol content). Negative values mean control plants had higher activity (or total phenol content). CAT:Catalase, SOD:Superoxide dismutase, POD:Peroxidase, PPO: Polyphenol oxidase, PAL:Phenylalanine ammonia-lyase. RGCh: “Rio Grande” grafted on “Cherry”, RGBer: “Rio Grande” grafted on eggplant.
