

The ARRIVE Essential 10

These items are the basic minimum to include in a manuscript. Without this information, readers and reviewers cannot assess the reliability of the findings.

Item	Recommendation	Section/line number, or reason for not reporting
Study design	1 For each experiment, provide brief details of study design including: <ul style="list-style-type: none"> a. The groups being compared, including control groups. If no control group has been used, the rationale should be stated. b. The experimental unit (e.g. a single animal, litter, or cage of animals). 	Line 125
		Line 124
Sample size	2 a. Specify the exact number of experimental units allocated to each group, and the total number in each experiment. Also indicate the total number of animals used.	Line 124
	b. Explain how the sample size was decided. Provide details of any <i>a priori</i> sample size calculation, if done.	Line 125
Inclusion and exclusion criteria	3 a. Describe any criteria used for including and excluding animals (or experimental units) during the experiment, and data points during the analysis. Specify if these criteria were established <i>a priori</i> . If no criteria were set, state this explicitly.	Line 125
	b. For each experimental group, report any animals, experimental units or data points not included in the analysis and explain why. If there were no exclusions, state so.	Line 125
	c. For each analysis, report the exact value of <i>n</i> in each experimental group.	Line 125
Randomisation	4 a. State whether randomisation was used to allocate experimental units to control and treatment groups. If done, provide the method used to generate the randomisation sequence.	Line 125
	b. Describe the strategy used to minimise potential confounders such as the order of treatments and measurements, or animal/cage location. If confounders were not controlled, state this explicitly.	Line 125
Blinding	5 Describe who was aware of the group allocation at the different stages of the experiment (during the allocation, the conduct of the experiment, the outcome assessment, and the data analysis).	Line 125
Outcome measures	6 a. Clearly define all outcome measures assessed (e.g. cell death, molecular markers, or behavioural changes).	Line 125
	b. For hypothesis-testing studies, specify the primary outcome measure, i.e. the outcome measure that was used to determine the sample size.	Line 125
Statistical methods	7 a. Provide details of the statistical methods used for each analysis, including software used.	Line 172-174
	b. Describe any methods used to assess whether the data met the assumptions of the statistical approach, and what was done if the assumptions were not met.	Line 172-174
Experimental animals	8 a. Provide species-appropriate details of the animals used, including species, strain and substrain, sex, age or developmental stage, and, if relevant, weight.	Line 122-124
	b. Provide further relevant information on the provenance of animals, health/immune status, genetic modification status, genotype, and any previous procedures.	Line 125
Experimental procedures	9 For each experimental group, including controls, describe the procedures in enough detail to allow others to replicate them, including:	Line 125
	a. What was done, how it was done and what was used.	Line 125
	b. When and how often.	Line 125
	c. Where (including detail of any acclimatisation periods).	Line 125
	d. Why (provide rationale for procedures).	Line 125
Results	10 For each experiment conducted, including independent replications, report:	Line 125
	a. Summary/descriptive statistics for each experimental group, with a measure of variability where applicable (e.g. mean and SD, or median and range).	Line 125
	b. If applicable, the effect size with a confidence interval.	Line 125

The Recommended Set

These items complement the Essential 10 and add important context to the study. Reporting the items in both sets represents best practice.

Item	Recommendation	Section/line number, or reason for not reporting
Abstract	11 Provide an accurate summary of the research objectives, animal species, strain and sex, key methods, principal findings, and study conclusions.	Line 122-124
Background	12 a. Include sufficient scientific background to understand the rationale and context for the study, and explain the experimental approach.	Line 125
	b. Explain how the animal species and model used address the scientific objectives and, where appropriate, the relevance to human biology.	Line 125
Objectives	13 Clearly describe the research question, research objectives and, where appropriate, specific hypotheses being tested.	Line 125
Ethical statement	14 Provide the name of the ethical review committee or equivalent that has approved the use of animals in this study, and any relevant licence or protocol numbers (if applicable). If ethical approval was not sought or granted, provide a justification.	Line 121-122
Housing and husbandry	15 Provide details of housing and husbandry conditions, including any environmental enrichment.	Line 124-125
Animal care and monitoring	16 a. Describe any interventions or steps taken in the experimental protocols to reduce pain, suffering and distress.	Line 125
	b. Report any expected or unexpected adverse events.	Line 125
	c. Describe the humane endpoints established for the study, the signs that were monitored and the frequency of monitoring. If the study did not have humane endpoints, state this.	Line 125
Interpretation/ scientific implications	17 a. Interpret the results, taking into account the study objectives and hypotheses, current theory and other relevant studies in the literature.	Line 125
	b. Comment on the study limitations including potential sources of bias, limitations of the animal model, and imprecision associated with the results.	Line 125
Generalisability/ translation	18 Comment on whether, and how, the findings of this study are likely to generalise to other species or experimental conditions, including any relevance to human biology (where appropriate).	Line 125
Protocol registration	19 Provide a statement indicating whether a protocol (including the research question, key design features, and analysis plan) was prepared before the study, and if and where this protocol was registered.	Line 125
Data access	20 Provide a statement describing if and where study data are available.	Raw data section
Declaration of interests	21 a. Declare any potential conflicts of interest, including financial and non-financial. If none exist, this should be stated.	Competing Interests section
	b. List all funding sources (including grant identifier) and the role of the funder(s) in the design, analysis and reporting of the study.	Funding Statement
