

Table 1: Percentage weight (mg) loss in three different life stages of *H. punctigera* over the complete ramping period of about 120mins from 25°C to CT<sub>max</sub> following thermolimit respirometry.

Life Stage	Weight loss (% Mean± SE)
Larvae	22.5±1.0a
Pupae	1.9±0.9b
Adult	17.9±1.2c

Means within columns are significantly different ( $p > 0.05$ , Tukey-Kramer LSD mean separation).

Note: n=10 in each life stage
