

Supplementary figures

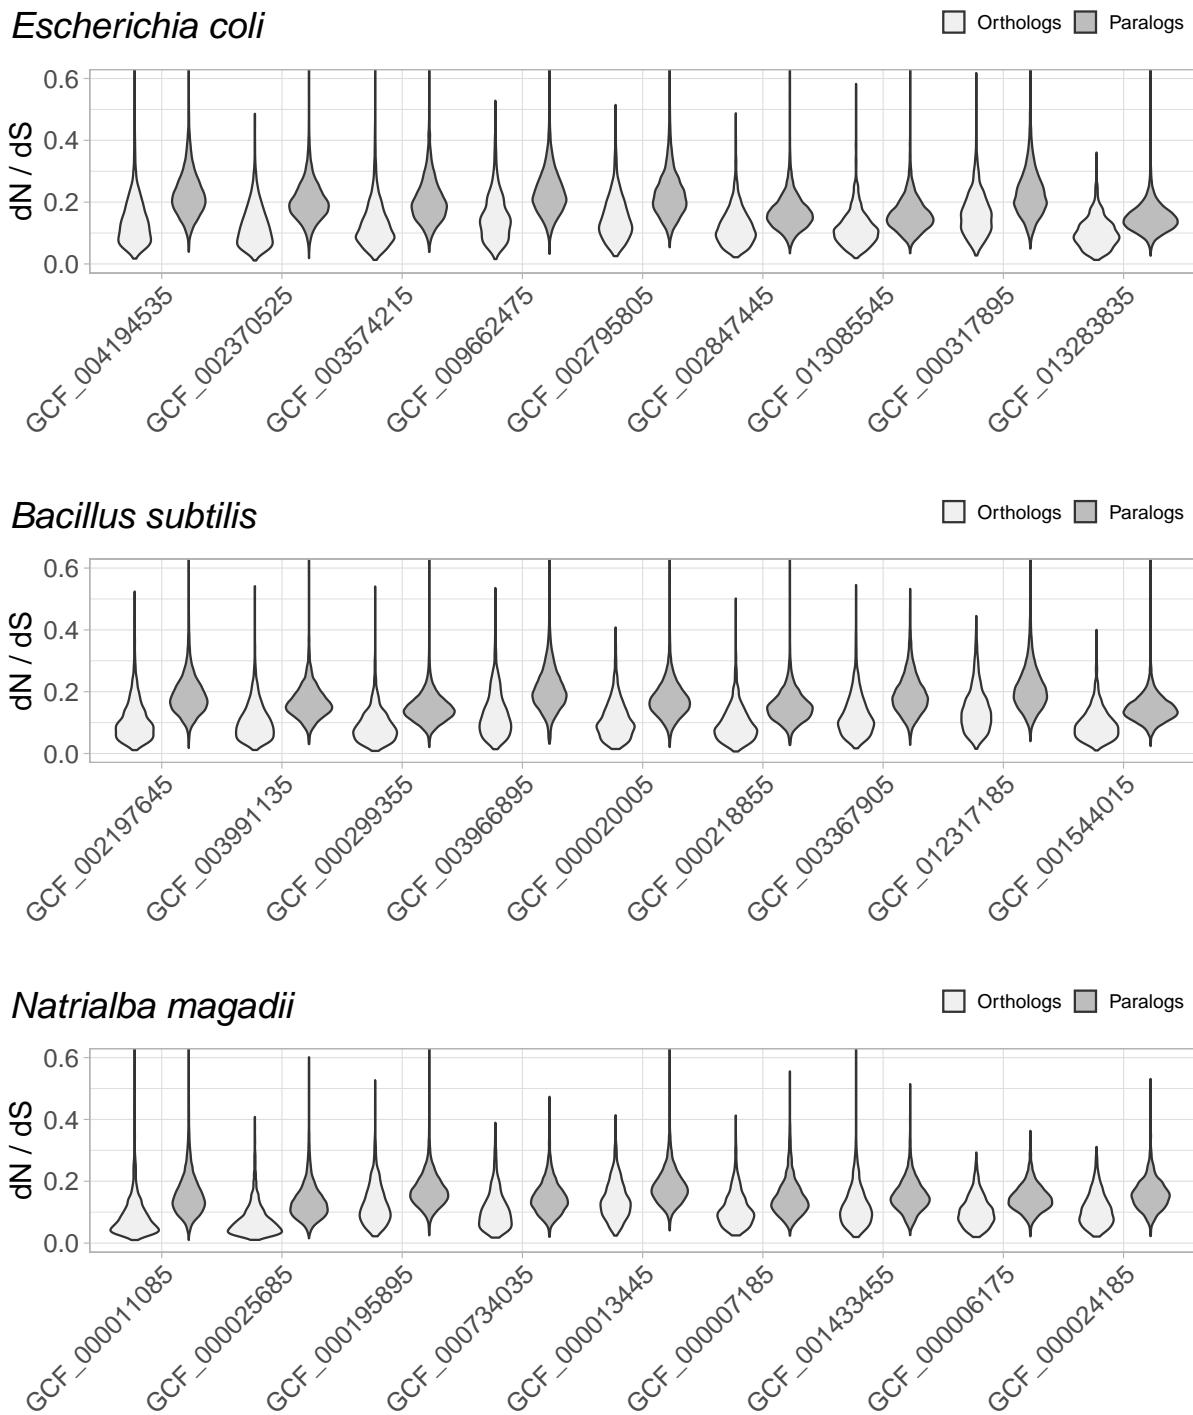

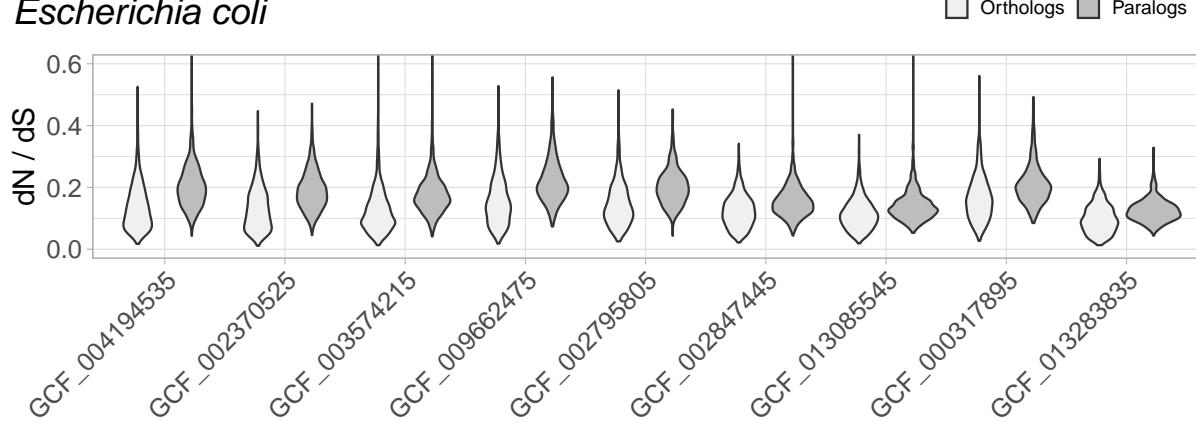

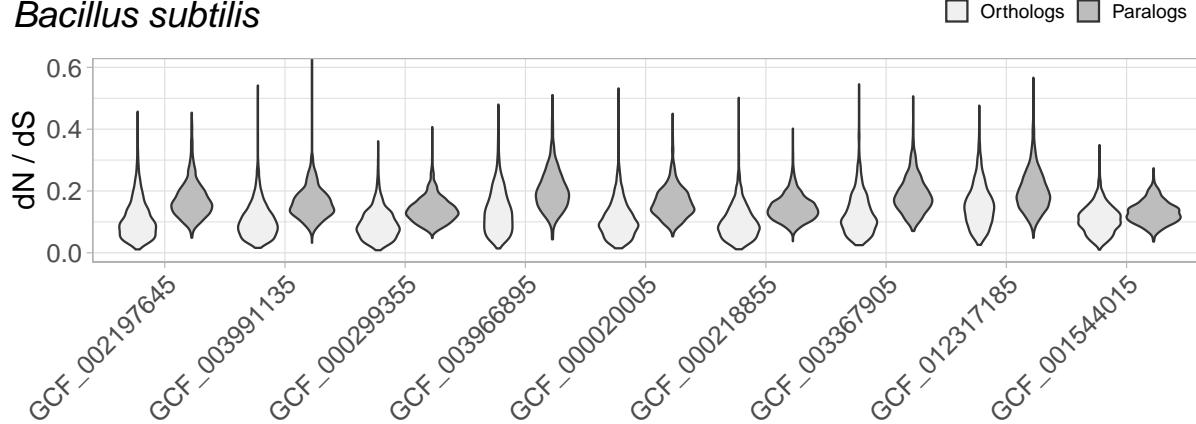

Figure S1: Full dN/dS results obtained with InParanoid as a working definition of orthology.

Escherichia coli

Bacillus subtilis

Natrialba magadii

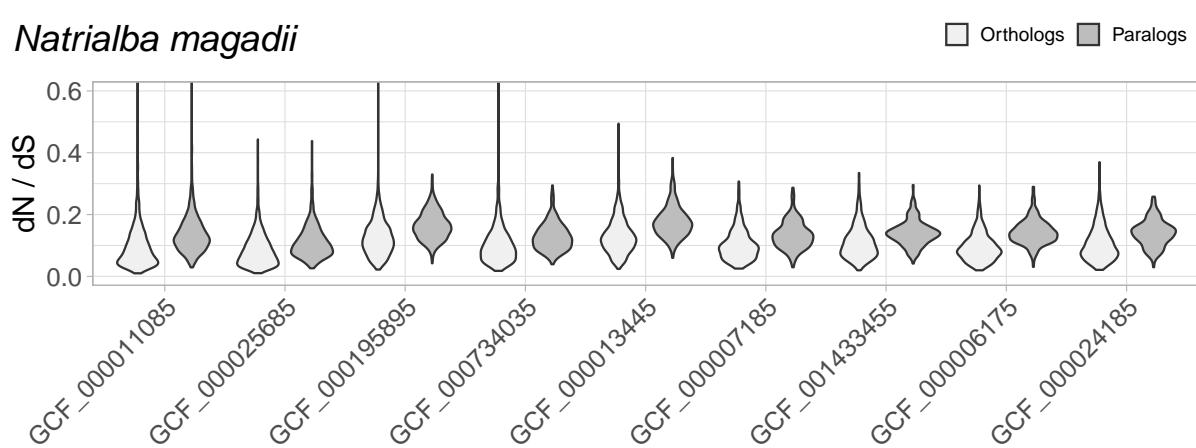

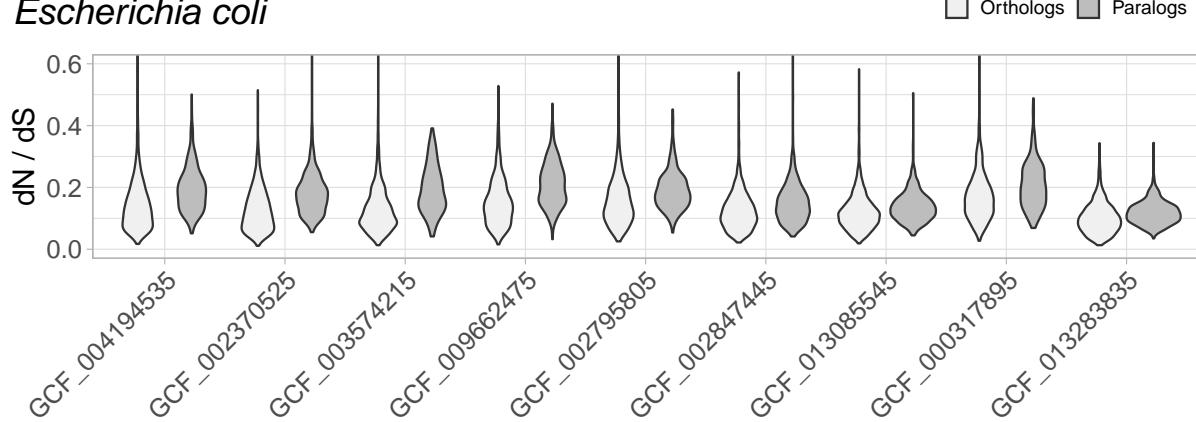

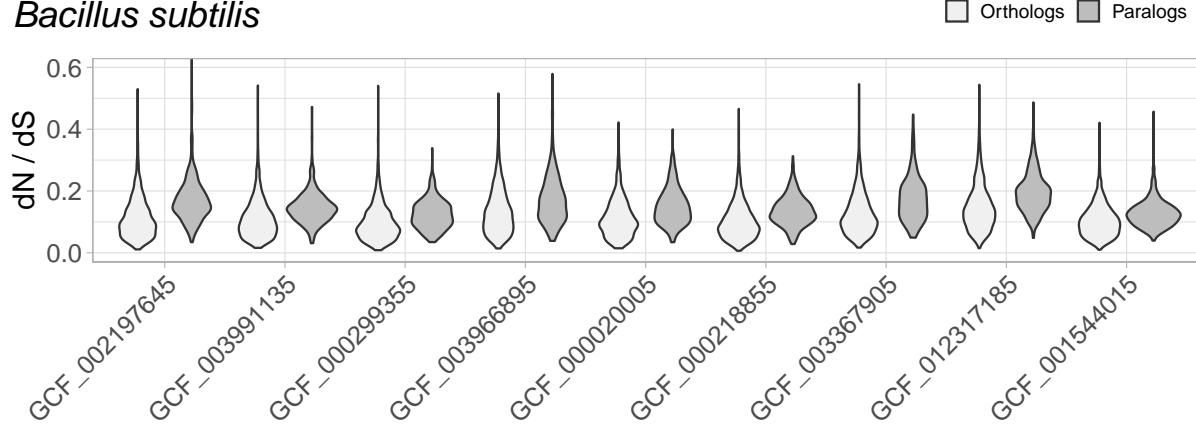

Figure S2: Full dN/dS results obtained with the Orthologous Matrix (OMA) working definition of orthology.

Escherichia coli

Bacillus subtilis

Natrialba magadii

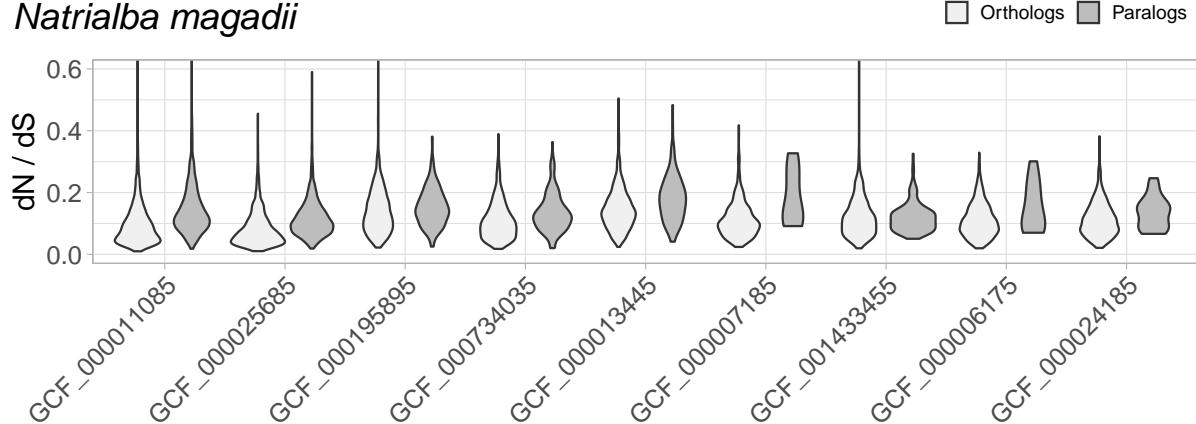

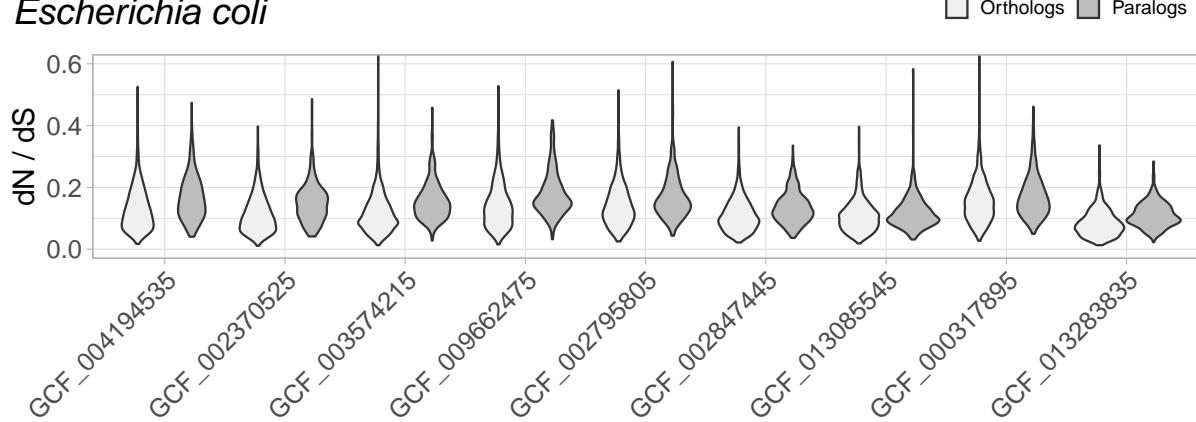

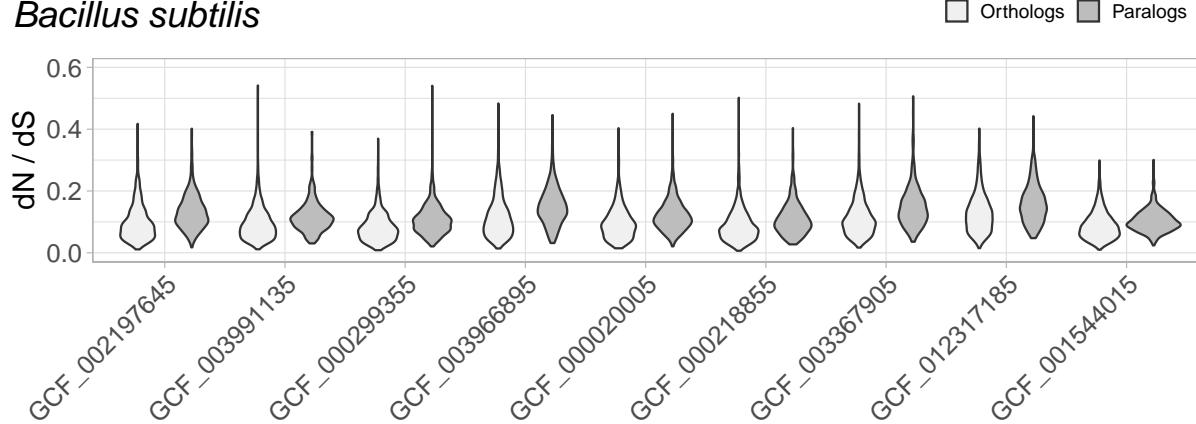

Figure S3: Full dN/dS results obtained with the OrthoFinder working definition of orthology.

Escherichia coli

Bacillus subtilis

Natrialba magadii

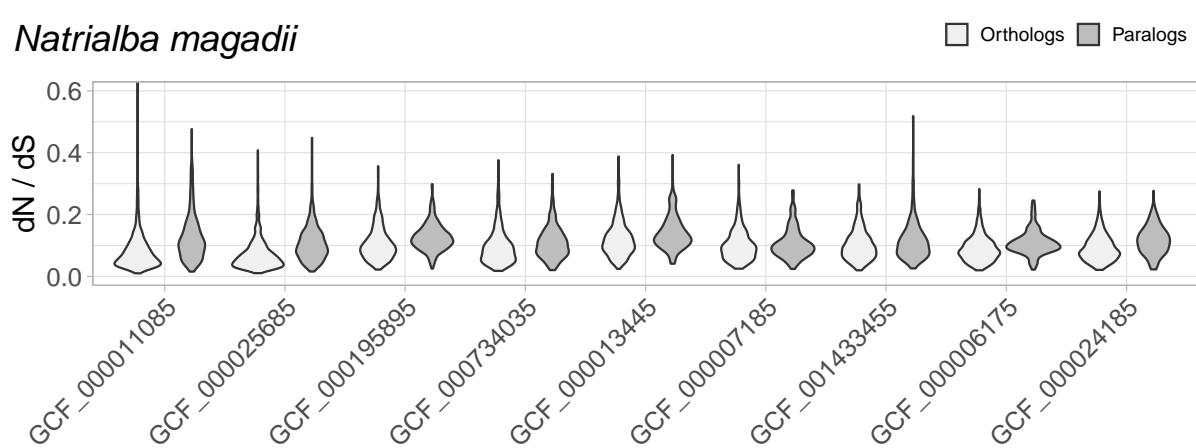

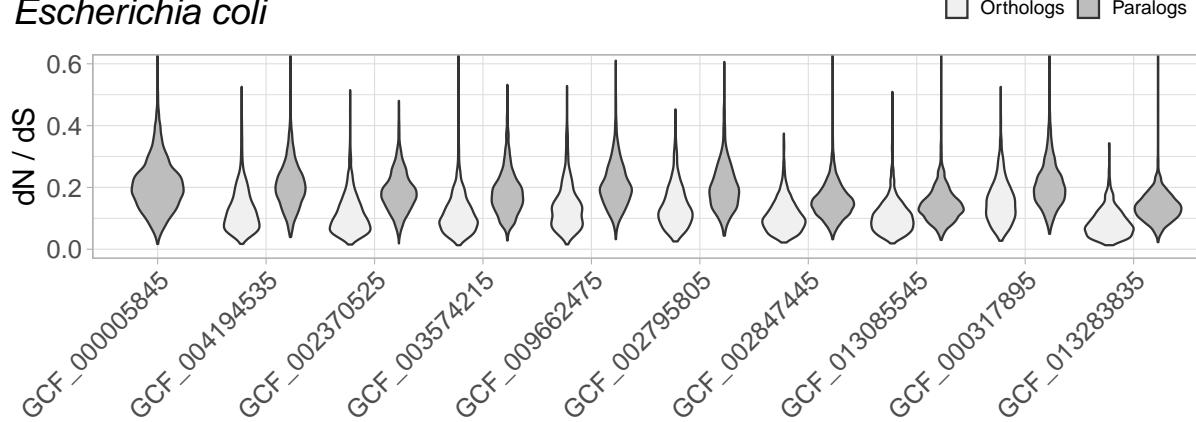

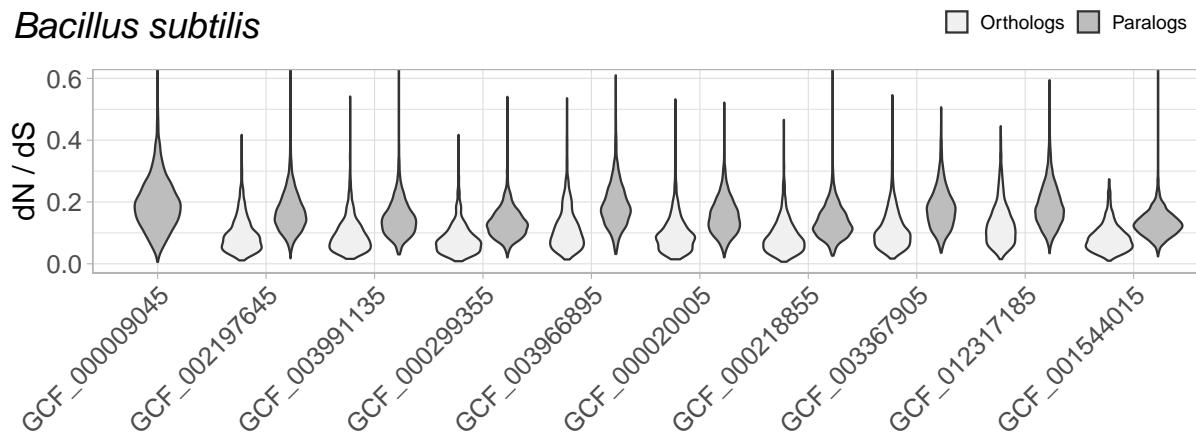

Figure S4: Full dN/dS results obtained with the ProteinOrtho working definition of orthology.

Escherichia coli

Bacillus subtilis

Natrialba magadii

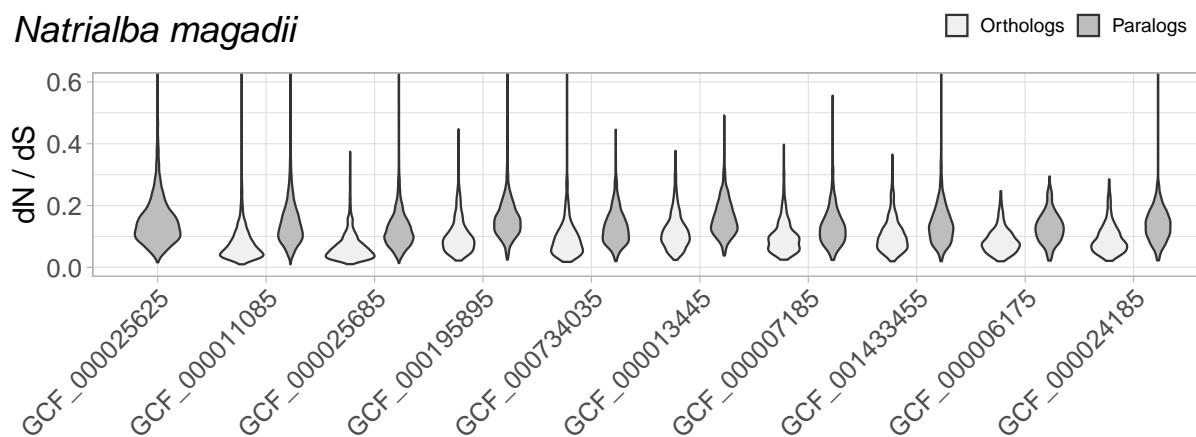

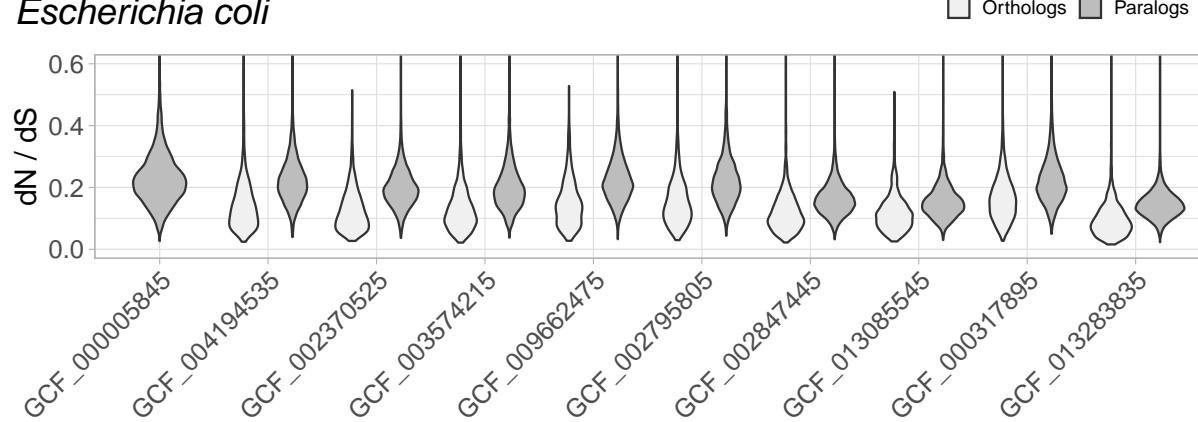

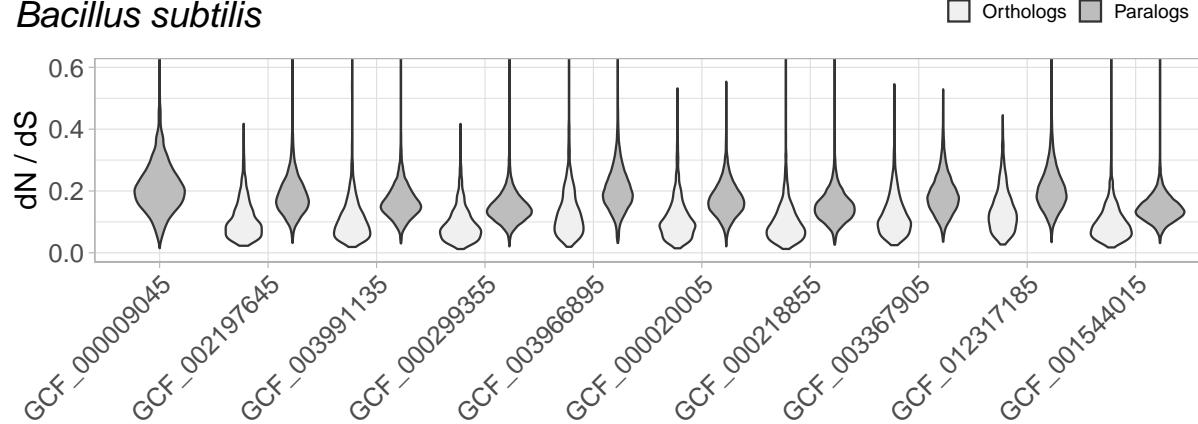

Figure S5: Full dN/dS results obtained with alignments covering at least 80% of both proteins.

Escherichia coli

Bacillus subtilis

Natrialba magadii

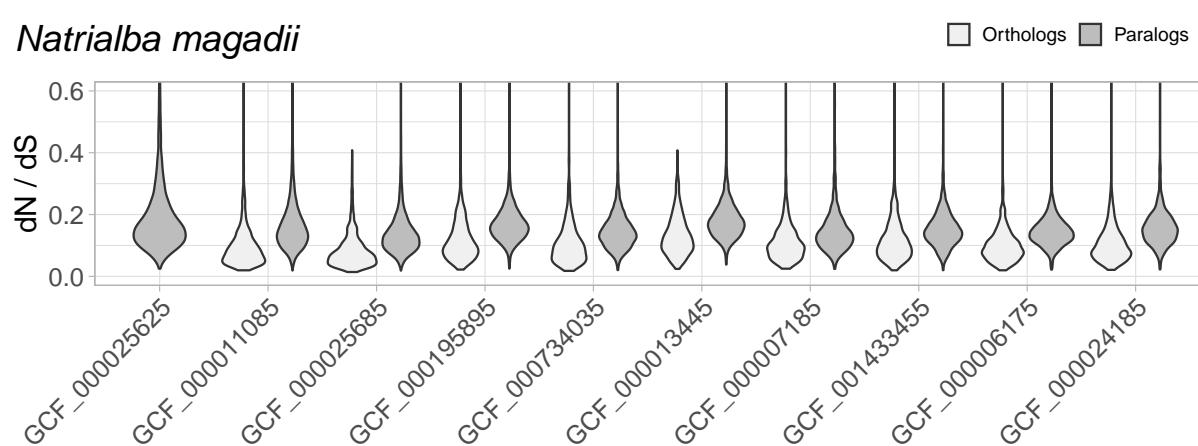

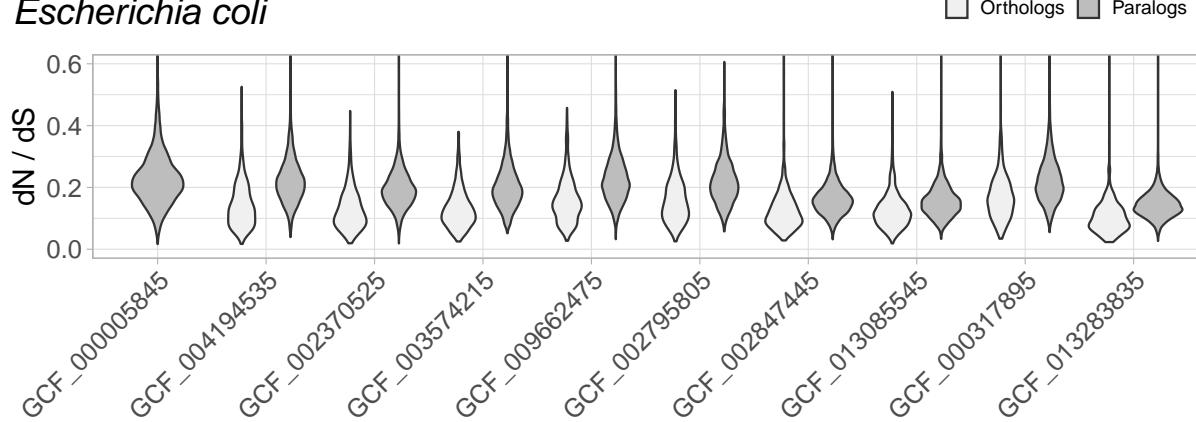

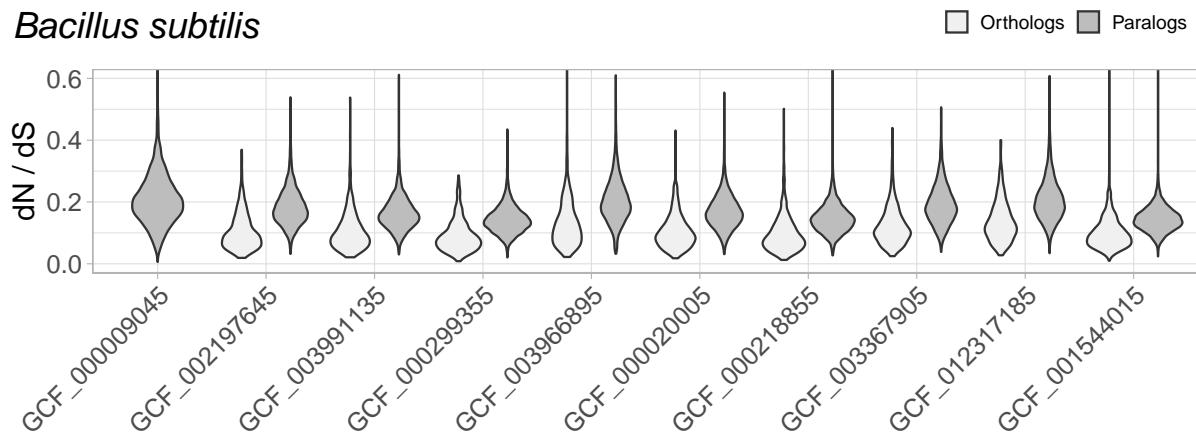

Figure S6: Full dN/dS results obtained with proteins no more than 70% identical.

Escherichia coli

Bacillus subtilis

Natrialba magadii

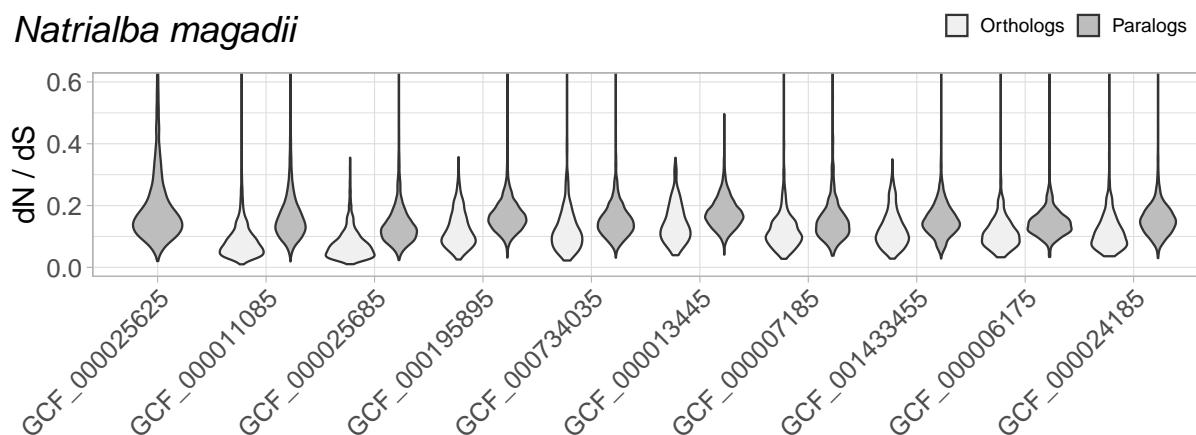

Figure S7: Full dN/dS results obtained with proteins within usual codon usage.

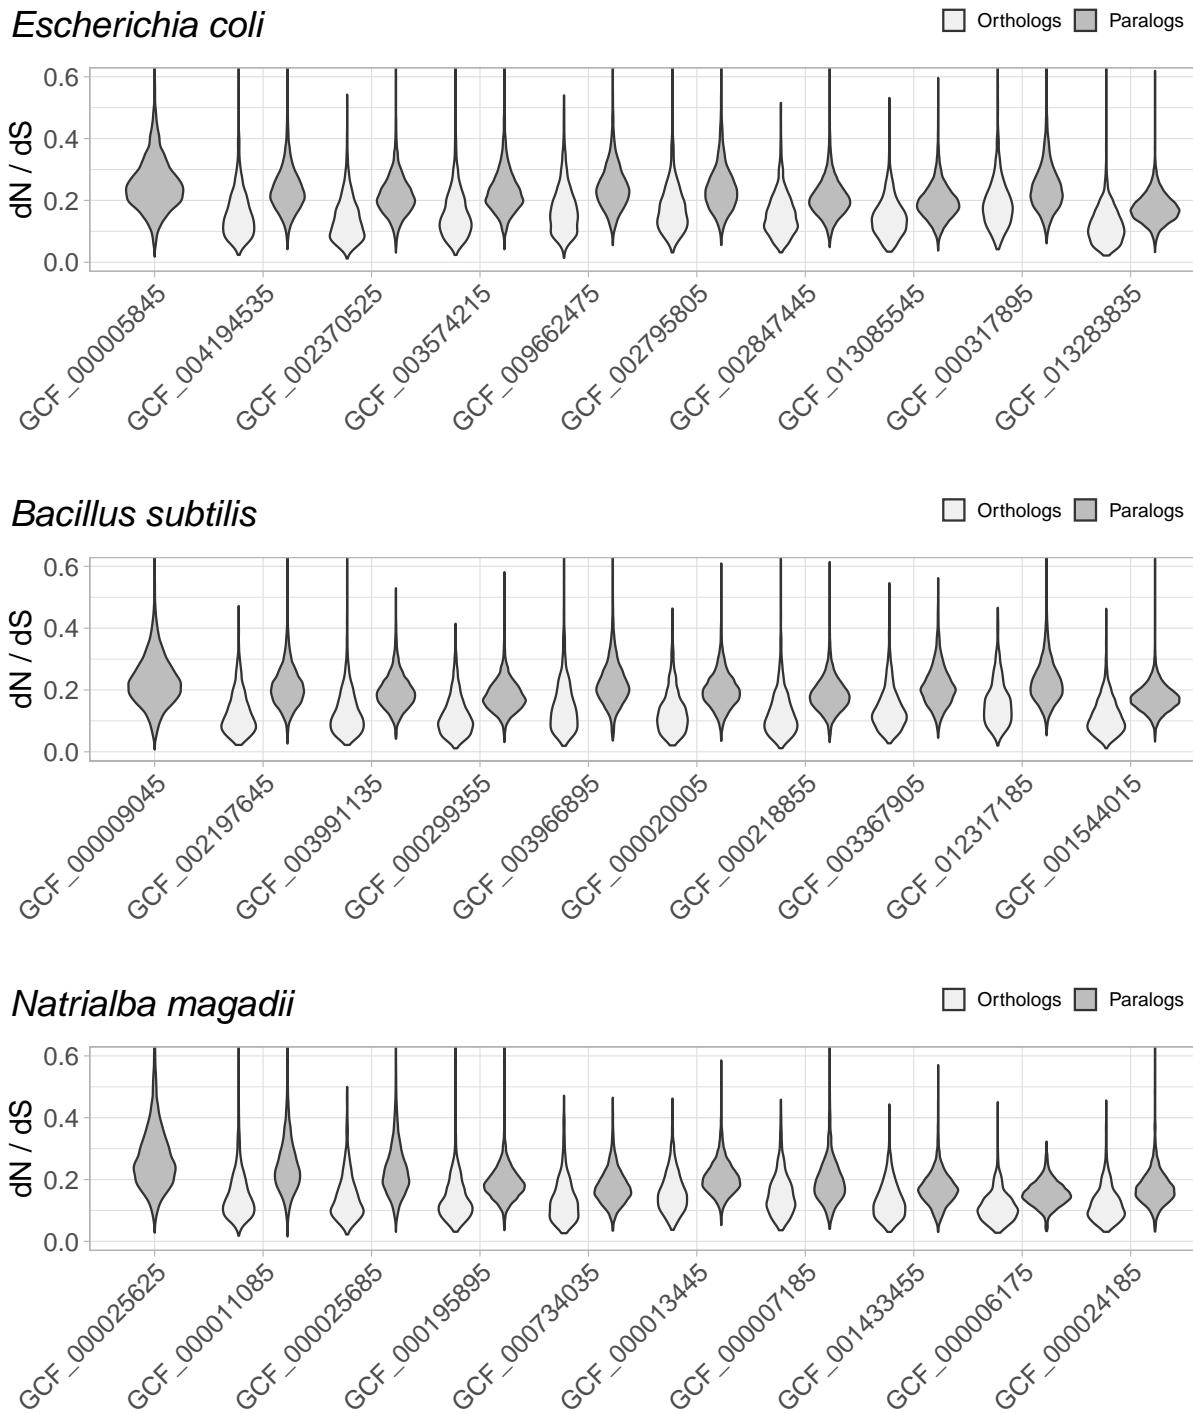

Figure S8: Full dN/dS results using Muse and Gaut's estimate of background codon frequencies.
