

i. **Outdegree ≥ 12**

The diagram shows a network of nodes, each represented by a blue square with a number. The nodes are interconnected by directed edges (arrows). A prominent feature is a dense cluster of red squares in the lower right, which appears to be a highly connected sub-network. The blue nodes are distributed across the upper and middle sections, with some forming smaller clusters and others being more isolated. The edges represent relationships or interactions between these nodes.

ii. Super-spreader
