

Supplemental Figure 22. Postural changes of AT among female participants during Test 1 (n = 17). The graphs show data from 4 REG leads: left and right fronto-mastoid (FM), left and right occipito-mastoid (OM) for sitting and supine positions. The graphs show confidence intervals with medians depicted as rhomb-shaped points. Additionally, points and intervals are highlighted by different colors to distinguish between first sitting (SA) and first 2 minutes of supine (HA) position and second sitting (SB) and last 2 minutes of supine (HB) position. A nonparametric Friedman test summary for statistically significant results: right OM (*Friedman statistic* = 20.64, $p = 0.0001$). “*” – $p < 0.05$, “***” – $p < 0.001$.
