

Supplemental Figure 27. Postural changes of CT among all participants during Test 1 (n = 37). The graphs show data from 4 REG leads: left and right fronto-mastoid (FM), left and right occipito-mastoid (OM) for sitting and supine positions. The graphs show confidence intervals with means depicted as circle-shaped points. Additionally, points and intervals are highlighted by different colors to distinguish between first sitting (SA) and first 2 minutes of supine (HA) position and second sitting (SB) and last 2 minutes of supine (HB) position. A one-way repeated measures ANOVA summary for statistically significant results: left FM ($F(1.404, 47.73) = 89.62, p < 0.0001$), right FM ($F(1.479, 51.77) = 55.95, p < 0.0001$), left OM ($F(1.544, 52.49) = 33.78, p < 0.0001$), right OM ($F(1.850, 66.59) = 14.33, p < 0.0001$). “*” – $p < 0.05$, “****” – $p < 0.001$, “*****” – $p < 0.0001$.
