

**Supplemental Figure 30. Postural changes of CT among all participants during Test 2 (n = 32).** The graphs show data from 4 REG leads: left and right fronto-mastoid (FM), left and right occipito-mastoid (OM) for sitting and supine positions. The graphs show confidence intervals with means represented by circle-shaped points. Additionally, points and intervals are highlighted by different colors to distinguish between first sitting (oSA) and supine (oHA) positions and second sitting (oSB) and supine (oHB) positions. A one-way repeated measures ANOVA summary for statistically significant results: left FM ( $F(1.665, 49.94) = 67.29, p < 0.0001$ ), right FM ( $F(1.553, 46.59) = 28.32, p < 0.0001$ ), left OM ( $F(1.658, 49.74) = 33.86, p < 0.0001$ ), right OM ( $F(1.165, 33.77) = 4.148, p = 0.044$ ). “\*\*\*\*” –  $p < 0.001$ , “\*\*\*\*\*” –  $p < 0.0001$ .
