

Supplemental Figure 41. Postural changes of alpha spectral power (P_{α}) calculated for Fz, Cz and Pz electrodes among female participants during Test 1 ($n = 16$). The graphs show confidence intervals with means represented by circle-shaped points, and medians depicted as rhomb-shaped points. Additionally, points and intervals are highlighted by different colors to distinguish between first sitting (SA) and first 2 minutes of supine (HA) position and second sitting (SB) and last 2 minutes of supine (HB) position.
