

Supplemental Figure 43. Postural changes of alpha spectral power (P_{α}) calculated for F3, F4, F7 and F8 electrodes among male participants during Test 2 ($n = 16$). The graphs show confidence intervals with means represented by circle-shaped points, and medians depicted as rhomb-shaped points. Additionally, points and intervals are highlighted by different colors to distinguish between first sitting (oSA) and supine (oHA) positions and second sitting (oSB) and supine (oHB) positions.
