

Supplemental Figure 47. Postural changes of alpha spectral power (P_{α}) calculated for C3, C4, T3 and T4 electrodes among female participants during Test 2 ($n = 16$). The graphs show confidence intervals with means represented by circle-shaped points, and medians depicted as rhomb-shaped points. Additionally, points and intervals are highlighted by different colors to distinguish between first sitting (oSA) and supine (oHA) positions and second sitting (oSB) and supine (oHB) positions. A nonparametric Friedman test summary for statistically significant results: C4 (*Friedman statistic* = 18,3, $p = 0.0004$). “***” – $p < 0.01$, “****” – $p < 0.001$.
