

Supplemental Figure 49. Postural changes of alpha spectral power (P_{α}) calculated for P3, P4, T5 and T6 electrodes among male participants during Test 2 ($n = 16$). The graphs show confidence intervals with medians depicted as rhomb-shaped points. Additionally, points and intervals are highlighted by different colors to distinguish between first sitting (oSA) and supine (oHA) positions and second sitting (oSB) and supine (oHB) positions.
