

Supplemental Figure 52. Postural changes of alpha spectral power (P_{α}) calculated for Fz, Cz and Pz electrodes among male participants during Test 2 ($n = 16$). The graphs show confidence intervals with medians depicted as rhomb-shaped points. Additionally, points and intervals are highlighted by different colors to distinguish between first sitting (oSA) and supine (oHA) positions and second sitting (oSB) and supine (oHB) positions.
