

Supplemental Figure 60. Simple linear regression graphs showing estimated relationship between RWA and $P\alpha$ in all 4 REG leads and several corresponding EEG electrodes among female participants in Test 1 ($n = 8$). Each point of certain color represents estimated relationship between RWA and $P\alpha$ in the corresponding pair of REG lead and EEG electrode, for example, left FM and F3 (LFM-F3), right OM and C4 (RFM-C4), etc. The lines indicate the general trend of the relationship.
