Note: The unit utilized is mmol/gDCW/hr. Glucose and oxygen uptake rates, under aerobic conditions, are 8.5 and 14.6 mmol/gDCW/hr, respectively (Niu et al., 2021). In anaerobic conditions, they are 20.8 and 0 mmol/gDCW/hr, respectively. ¹The values are provided by Niu et al. (2021). AER and ANA refer to aerobic and anaerobic, respectively.
